Basic definitions[edit] Family tree. Cousins are colored green. Generations are shown by alternating stripes of gray and white. People are related with a type of cousin relationship if they share a common ancestor and the most recent common ancestor is two or more generations away from both people. For example, the second cousin once removed relationship is a second-degree cousin with one removal. The removal of the cousin relationship is the number of generations the cousins are apart. When the cousins are separated by a different number of generations from the most recent common ancestor, the cousin relationship is removed. The difference between the number of generations for each cousin is the removal. Note that two people can be removed but be around the same age due to differences in birth dates of parents children and other relevant ancestors. If the cousins are removed, the smaller number of generations to the most recent common ancestor is used to determine the degree of the cousin relationship. If one had to go back two generations beyond the parents great grandparents and the other had to go back two or more they would be second cousins [6] [4].

Multiplicities[edit] Double cousins arise when two siblings of one family mate with two siblings of another family. Double first cousins share both sets of grandparents and have twice the degree of consanguinity of ordinary first cousins. Half cousins are descended from half siblings. The children of two half siblings are first half cousins. If half siblings have children with another pair of half siblings, the resulting children would be double first half cousins. Unlike all the other cousin relationships discussed thus far, this relationship is not necessarily reciprocal, as the maternal cousin of one person could be the paternal cousin of the other. Parallel and cross cousins on the other hand are reciprocal relationships. Parallel cousins are descended from same-sex siblings. Cousins that are related to same sex siblings of their most recent common ancestor are parallel cousins. Cross cousins are descendants from opposite-sex siblings. Neither of these relationships have consanguinity.

This was my very first family tree, made when I was only about seven or eight years old. I needed to have one for a school project, so I asked my mother to help me with it.

Family trees are often presented with the oldest generations at the top and the newer generations at the bottom. An ancestry chart, which is a tree showing the ancestors of an individual, will more closely resemble a tree in shape, being wider at the top than the bottom. In some ancestry charts, an individual appears on the left and his or her ancestors appear to the right. A descendancy chart, which depicts all the descendants of an individual will be narrowest at the top. Family trees can have many themes. One might encompass all direct descendants of a single figure, or all known ancestors of a living person. Another might include all members of a particular surname. Yet another approach is to construct a tree including all holders of a certain office, such as kings of Germany. This relies on dynastic marriage to hold together the links between dynasties. The image of the tree probably originated with one in medieval art of the Tree of Jesse, [1] used to illustrate the Genealogy of Christ in terms of a prophecy of Isaiah. Fan charts depict paternal and maternal ancestors. However, because a parent must be born before their child is born, a person cannot be their own ancestor, and thus there are no loops, so ancestry forms a directed acyclic graph. The graphs of matrilineal descent "mother" relationships between women and patrilineal descent "father" relationships between men are trees however. Assuming no common ancestor, an ancestry chart is a perfect binary tree, as each person has exactly one mother and one father, for two parents; these thus have a regular structure. A descendancy chart, on the other hand, does not in general have a regular structure, as a person can have any number of children, or none at all. Notable examples[edit] The longest family tree in the world is that of the Chinese philosopher and educator Confucius (c. 551 BC), and he is the descendant of King Tang (c. 1600 BC). The tree spans more than 80 generations from him, and includes more than 2 million members. An international effort involving more than 100 branches around the world was started in 2000 to retrace and revise this family tree. A new edition of the Confucius genealogy was printed in September by the Confucius Genealogy Compilation Committee, to coincide with the 2500th anniversary of the birth of the Chinese thinker. This latest edition is expected to include some 1. In Japan, the ancestry of the Imperial Family is traced back to the mythological origins of Japan. The connection to persons from the established historical record begins in the mid-first millennium AD. Another very old and extensive tree is that of the Lurie lineage, which includes Sigmund Freud and Martin Buber and traces back to Jehiel Lurie, a 13th-century rabbi in Brest-Litovsk, and from there to Rashi and purportedly back to the legendary King David, as documented by Neil Rosenstein in his book *The Lurie Legacy*. In the Torah and Old Testament, genealogies are provided for many biblical persons, including a record of the descendants of Adam. According to the Torah, the Kohanim are descended from Aaron. Genetic testing performed at the Technion has shown that modern Kohanim share common Y-chromosome origins, although there is no complete family tree of the Kohanim. In the Islamic world, claimed descent from the prophet Mohammed greatly enhanced the status of political and religious leaders. New dynasties often used claims of such descent to help establish their legitimacy. Many noble and aristocratic families of European and West-Asian origin can reliably trace their ancestry back as far as the mid to late first millennium AD; some claiming undocumented descent from Classical Antiquity or mythological ancestors. Before the Dark Ages, in the Greco-Roman world, some reliable pedigrees dated back perhaps at least as far as the first half of the first millennium BC; with claimed or mythological origins reaching back further. Roman clan and family lineages played an important part in the structure of their society, and were the basis of their intricate system of personal names. However, there was a break in the continuity of records-keeping at the end of Classical Antiquity. Records of the lines of succession of the Popes and the Eastern Roman Emperors through this transitional period have survived, but these are not continuous genealogical histories of single families. The genealogy of Ancient Egyptian ruling dynasties was recorded from the beginnings of the Pharaonic era circa 3100 BC, to the end of the Ptolemaic Kingdom; although this is not a record of one continuously-linked family lineage, and surviving records are incomplete. In some pre-contact Native American civilizations, genealogical records of ruling and

priestly families were kept, some of which extended over at least several centuries. In many human cultures clan and tribal associations are based on claims of common ancestry; although detailed documentation of those origins is often very limited. Other uses[edit] The author Pete Frame is notable for having produced "family trees" of rock bands. In this instance, the entries represent membership of certain groups, and personnel changes within them, rather than family relationships. Several books have been produced with his family trees, [5] which in turn have led to a BBC television series about them, including interviews from the bands depicted in the trees.

Way before the internet generation! My mother had told me that she was born in England and that my father was American with a little Indian in his blood. That statement got me wondering about my grandparents and great-grandparents. I knew very little about them, much less where they had been born or lived. In my later years, I always remembered what she had told me. By the time the internet came around, I had started my first family tree. If you are not interested in seeing the actual documents, you could try the free WikiTree. I started my tree from information I had on my father. We already had the birth, marriage and death records, but I was looking for more than that. My mother did not tell us much about his younger years. Other records I came across were yearbook pictures, newspaper articles, and military history. After saving all these documents to my tree, I then added some photos. I included a picture of him as a toddler, a graduation picture and one of him a few years before he died. I considered myself somewhat of a perfectionist. I wanted to include as much information as I could on my family tree. I asked my mother to fill in the blanks about his childhood. She told me that his grandmother had raised him after his parents divorced. They had fought back and forth for custody of him and his sister. After graduating high school, he enlisted in the Army where he served in Germany until In we received a call from his sister about a footlocker that belonged to my father. The items were in pristine condition and looked new, even after so many years. Included in the locker were his uniform, a graduation book, and letters. My father was the starting point of growing my family tree. I continued down the line on Ancestry. I was able to go back six generations to Daniel Wakenight Maryland to Illinois. I also found that there was more on the internet than the family tree sites for my research. One website, created by Sharon Strow, was very beneficial in my search. On this website was a section entitled The Descendants of Daniel Wakenight. There were many different ways to spell Wakenight, including Weichneicht, Weidkneicht, Whytkneicht. I, myself, wonder if it could have been Weinacht, meaning Christmas, but this is speculation. Thank you for taking the time to read my article. I would love to hear from anyone who might know where I could find more information on this German name. Please feel free to post a comment or send me an e-mail.
