The Stage Awaits - Will Your Kid Step On? You might not know, but Civic Theatre is much more than just dazzling performances. The School of Theatre Arts also finds its home in the historic building on Division.

You might not know, but Civic Theatre is much more than just dazzling performances. The School of Theatre Arts also finds its home in the historic building on Division. The robust, award-winning program offers a variety of introductions to theatre from acting to dance to backstage technical work. Their goal is to provide hands-on opportunities for students to experience the beauty of theatre through classes, camps, and workshops. Below is a list of ways that your student can deepen their knowledge of theatre and make their way to the Civic Theatre stage. With classes starting at age 4 and going all the way to adults, no age group is missed in the curriculum. All classes are led by experienced theatre professionals who are able to give a first person perspective on anything from being on the stage to creating the costumes that you see in a show. Each term allows students to focus on the areas they are most interested in. You can dive into anything from stage makeup to puppetry. Many of the actors that you see in performances started with these classes – both young and old! Their days are filled with creativity and collaboration with other students who are passionate about the art of theatre as well. This is another great introduction for students to explore different aspects of theatre. Students 4th grade on up are walked through the typical show process from auditioning to the performance, in a condensed period. They work with professional theatre staff including directors, stage managers, music directors, choreographers, and technicians to ensure that they are given the true mainstage experience. This is a great way for students who have taken some foundational classes to move to the next level. Each year, this outreach program offers local schools and community venues the opportunity for live theatre to come to them. Traveling Troupe brings the sets, sound, equipment, costumes, crew, and actors – all they need is an audience! This is great way for students to participate in a show while learning the importance of sharing your talents with your community in a direct way. Now in its 27th year, Traveling Troupe has played for more than , children and adults! There offer two tracks: The performance group focuses on acting while the Production students get to learn more about design and technical work. Students spend their afternoons in classes with theatre professionals and their evenings in rehearsals. Geared for students interested in a career in theatre, this is an opportunity for them to soak up all aspects of theatrical performance while preparing to be part of the two final shows in a Civic Theatre season. What are you Waiting For? Whether your student is a season veteran of the stage or looking to begin their journey into the world of live theatre, the School of Theatre Arts provides lots of opportunities to help facilitate their next steps. If you have an aspiring thespian or backstage technical genius in your family, make sure to check out all that the school has to offer.

Chapter 2 : The Civic Plaza Outdoor Stage Gets A Facelift - New Mexico Technology Council

This chapter examines different ways in which people came into contact with temples, statues, and other representations of divine qualities. It explores festivals and rites honouring divine qualities; senate meetings in temples to divine qualities, and the extent to which this created opportunities for contemporaries and later writers to draw on the qualities in question; visits to artwork.

FK8 First up, the shifter knob. Shifter knobs are a personal preference. There is no "right" or "wrong. On public roads, there are just too many gearing possibilities for any given situation. On the track, for any given situation, there is only one right gear, and only one right time to up-shift or down-shift. Perhaps this comes from learning manual in a Ford Falcon with a three-on-the-tree or perhaps from the M-B D that, due to , miles of wear, and parts availability, had on the tree, and on the floor. On public roads, I was, and am, fine with the stock Type R shifter knob. It is a ball, so it works perfectly for many people. Many people are "Top" shifters - their hand goes over the knob so the knob is carried in the middle of the palm or the palm is horizontal. Others are "Side" shifters - they wrap their hand around the knob so their palm is vertical. Others are in-between, or do both. I had to video myself for this review to figure that out. The Type R ball rests directly on the black base bit. Unfortunately, the Honda Access shifter knob is currently unavailable in North America, and is rumoured to be quite expensive. However, it has one other disadvantage for me: I cut new threads see below so I could have the Access knob at the height I want. Pics of OE knob vs. Note how the mid-point of the knob is more-or-less at the ridge in the insulation of the shaft of the screwdriver: See how much taller the Acuity knob is, just like the Honda Access knob? This height is ideal for a "Side" shifter who likes the stock height. This lowers the height a bit: How about if we dispense with lock nuts altogether, and screw the shifter knob all the way down? Perfect for me - However, there are some issues: With no lock nut, the shifter can come unscrewed; and 3. The shifter boot flops around. First of all, the pattern. Think about this for a second. Why is there a pattern? Do you not know where your gears are? Do you actually look at the pattern and say, yup, I forgot where reverse is, good thing the pattern is on the shifter knob? Second, no lock nut. I wrapped the shifter rod threads with some Teflon tape a. You can also use a little bit of nail polish on the rod threads, or a very - VERY - weak thread locker. Do not use Red or Blue threadlocker. Finally, the shifter boot. My first solution involved using electrical tape, but did involve disassembly of the console. Fixing the loose shifter boot with electrical tape 1. Follow step 1 and steps 3 through 6 of of the guide. Do not ignore step 1. Screw down the Acuity knob. Wrap electrical tape around the shift lever where the arrow points. I used three - one foot lengths of electrical tape, capped by a six-inch length. The amount of tape should be just enough that the silver cap on the shifter boot can be forced over it. Boot pulled out of the way for this pic. Re-install connectors for the parking brake, brake hold, and mode button, which is the reverse of step 6 in Acuity guide. Note the guide has tips for re-installation for every step, which are very helpful. Be sure to read those. Step 1 in Acuity guide. Go for a short drive to get all systems working. Make sure the parking brake switch works, the brake hold button works, and the mode button changes modes. If this happens, turn off the car, wiggle the connectors to make sure that the connectors are fully seated, then startup again and see if the warnings return. Guess what happened to me Remove shifter knob, make sure the shifter boot stitching is lined up, and push the shifter boot down onto the electrical tape "plug" until the top of the boot is just around the bottom of the threads. Thread on shifter knob. Reverse step 5 and step 4 of Acuity guide. The electrical tape solution really bugged me, so I came up with a second solution: However, you should have some experience working with taps and dies as it is quite easy to use a die incorrectly and be stuck having to buy a new shifter. I used a rethreading die from Lang tools, but it might be easier for Americans to get just the one rethreading die needed from Snap-On <https://www.snap-on.com/>: You can run the die down a couple inches past the original threads until the diameter of the shifter rod increases. Then you can align the pattern if you want, and lock the knob using the base collar. Just keep in mind that the new threads are fragile, so use only just enough torque to lock the shift knob in place. Finally, a short rant on material choice. People seem to not like the stock knob because it is metal and will burn your palm when it is hot. Put a glove on it. Put a hankie over it. Get a
