

OpenCart is known as one of the most popular platforms to get started with a functional and effective eCommerce site. As the default setting, OpenCart includes a pre-installed template from the first installation. The theme serves as a foundation to create custom OpenCart templates of your own. If.

Your success is our success. Pro Support Team Guaranteed, up to 48 hours response time provided by the same awesome team that developed all of our products. This is why all of our modules come with open source code that you can modify. The project manager kept close contact with us and updated us on the progress weekly. The deadline was tight but they managed to finish right on time. From the first day, we love the quality of code they deliver coupled with best customer support in the industry. All their products are innovative with clean and crispy code – simply love it! They help instantly, nice service and certainly a company that gives the little extra! The site looks fantastic. I am working shoulder to shoulder with iSenseLabs for almost three years and their services are best in breed! This says everything about the support after sales. If I had to take a vote about your service without doubt I offered 5 stars. I hope you guys continue to do a good job, and give good support to all customers as it has been so far. Alain Coppens Owner, Supershop. The modules are very easy to install and the support is outstanding. In Romania it is recommended by many people as one of the companies that make the best extensions for OpenCart. So I bought with confidence but had an issue. The support team intervened quickly and solved all my problems. Congratulations for your great support team. They responded promptly, professionally, and to the point. I had customised them according to my store requirement with the prompt support provided by your team. I wish your team congratulation and looking for more great modules that could improve my sales. You guys always get there with me and bring about a fantastic fix or update that gets my site running just the way I want it. Bill Kougioumtzidis Managing Director, SugaSpank I have found iSenseLabs to be very easy to work with, they are very professional and have a great attitude towards customer service Darren Shaples CEO, Cloudstix Cleverly made modules, best support ever, able to make any customisations. They are very professional and they have a great team of highly skilled OpenCart programmers. With iSense our platform is always evolving and up to date with the latest tools to take our business to the next level. All the work did for us was delivered on time, abided by our high standards and given top notch support for. All work delivered had a great impact on conversion rates for us. They are innovative, thoughtful and most importantly, intuitive to for end user and admin. The support is awesome and the team continue to push forward. Using their products fills myself and my clients with confidence - highly recommended! Their products and support are just world class. They also helped me with cost saving suggestions, worked in a timely manner and delivered a delightful product, which fit my Agile preferences. They show a profound understanding of OpenCart and a sharp and reliable service. And when I need a little tuning, the support is First Class. I cannot overstate how rare that combination, seems to be. Awais Butt CTO, mygerrys. For me it is a pleasure to work with a young team that would do even the impossible in order to meet my requirements quickly and accurately. I highly recommend iSenseLabs to anyone who requires elegant design and high quality. After a couple of modules I have to say this: I really feel that they go into depths of my issues and are not hasty in their replies. Overall I am very happy with iSenseLabs and only buy modules from them. Martin Libossart Owner, Estilosdemoda. I look forward to working on many projects with them to streamline and optimize our OpenCart store! Again to stress at the support - quick, friendly and helpful in many ways. This is the reason, I am choosing iSenseLabs over others, over and over again. Two-time, 1st place design award winner in the OpenCart design hosted competitions. Most sold and recognized products in the market.

Chapter 2 : 10 Best OpenCart Theme For Your Business | FromDev

In opencart theme development tutorials, you have seen that every section of the website is an individual php file in view directory of opencart.

As the default setting, OpenCart includes a pre-installed template from the first installation. The theme serves as a foundation to create custom OpenCart templates of your own. This allows you to separate concerns between the data and the presentation. The framework is structured in a clear and simple way. The latter is of special interest to us in this guide as we will end up with a custom front-end theme. OpenCart adds the Language element to it. That is why we refer to it as MCV-L. The language element is responsible for separating data written in different languages for multi-lingual sites. Controller that is intended to handle the application logic. Model that fetches data from the back-end database. View that is responsible for rendering the front-end layout. This is where the pre-built template provided by OpenCart is placed. The default theme structure looks like this: Image directory contains all image files related to the default theme. Stylesheet directory containing skinning related code. However, if you need more, you can create custom modules that will meet your personal requirements. The modules are included into the template directory. Here is how those can be reached via the template categorization. Every OpenCart template is made up of a series of categories like: Common includes the common elements that are available across different pages in the same directory. These are header, footer, and sidebar elements. This is also a place where you can include other files of your template if you want those to appear across different pages of your site. Error stands for the error template. Information contains templates that are related to Contact Page, Sitemap Page, and Static information page. In general, there are two possible scenarios in which you would like to create a custom theme of yours: Revamp the default interface completely; Bring a couple of changes to it, like a different layout structure, color scheme, etc. This should make it much easier to you to upgrade the OpenCart version in the future. Before you proceed to the creation of a custom OpenCart template, make sure that you have a working installation of OpenCart. As a rule, you will see a single store entry displayed only. More than one row is revealed for sites with multiple stores being set up. With OpenCart, you can install multiple stores with a single installation as well as manage all of them within one admin interface. By doing this, you will open the store configuration interface. With a click on the Store tab you will be able to select the front-end theme. To apply changes, click the Save button. Now, if you check the front-end, you will see everything working just fine. So, how does it work? This is when we need to get straight to discussing template overriding. Whenever you set up a custom template as an active theme of the OpenCart store, its front-end will still look the same before we activated the new theme in the back-end. This is happening due to the template overriding system. It works like this: In order to render the homepage, OpenCart uses the following path to the template: This may come in handy when you need to tweak just a few of the theme files instead of revamping it from scratch. Apply the same action to the stylesheet and image. Copy those from the default theme and paste in the respective directory of the custom template. You will see something like this: The thing worth to mention at this point is that you need to copy only those template files to the custom theme that should to be tweaked. If you do not need to bring any changes to the file, those will be automatically picked up from the default theme. Moreover, you will need to maintain the files structure similar to the way those are organized in the default theme. The code that this file contains is used to display the header section on your site. Take a closer look at the code and you will see several stylesheet references hard coded in the default theme. Find the following code:

Chapter 3 : OpenCart Training - On demand OpenCart video tutorials

In this video, we describe OpenCart Theme Development Tutorials. Preweb solutions offering you people free opencart tutorials from zero to hero. You will learn about the opencart theme development.

The way you respond to support requests etc. Create a Support Forum Creating a centralized place for support has many benefits both for you and your customers. Benefits It is searchable and users can help each other. It brings a sense of community, a place where users put their trust. Your behavior here will determine a big part of the image your customers have of you. You can easily get someone from your team or a friend to help you. Email is cumbersome if multiple people need to manage one inbox. You bring traffic to your site where you can promote your other products

5. Use vQmod If you really need to patch some of the core files it is imperative that you use vQmod, but again, patch less and only the unique segments of code hooks so that you reduce the change of possible interference. From my experience the average OC user has vQmod based extensions. Again apply the principle of less here: Benefits Quickly disable and enable part of your extension or the whole Acts as a centralized place to keep your modifications
6. Use a Versioning Tool: You need to be able to capture that growth in a system that lets you track the changes useful for release notes keep your source files safe from losing any changes and ease the integration. Benefits Acts as a back-up for your project code Easier to track what changed and when Allows for easy collaboration on the source code Eases the process of preparing a release or patch
7. Have an Online Demo If a picture is worth more than a thousand words image what a profound effect can showing the real thing to your customers could have. People need to see, touch, feel your product before committing to purchase your it. The higher the price the more convincing you need to be. The online demo is the first place to start. Benefit If customers can test your product and see the benefits it provides they are one step closer to imagining how it may integrate in their existing business, thus one step closer to a purchase. Provide an Admin Panel If you have any variable that influence the behavior of your extension you need an admin panel. The admin panel is the place where you can let your users set the parameters of your extension. Also it would be a good thing to have some options for testing your extension and temporarily disabling it. Avoid sending users to fiddle with files through FTPâ€”it takes longer for the not so experienced and most of shop owners are not experienced yet big part of them buy themes and extensions. Give control in the hands of the users and they will be happy. You can never know all the ways people plan to use your product. Do you want to have to support everything that deviates from the way you thought of your product? The admin panel is another kind of marketing tool, too. You can show your skills there by designing a usable interface that is straight to the point, gets the job done and displays your logo thus ensuring brand presence. More than everything focus on the experience. Think like your user. Count the number of steps they needs to do in order to achieve the goal. Think how can you reduce that. Respond Quickly Everybody hates to wait, right? Leave that for a support person if you have a dedicated one, but checking email twice a day in work hours is usually above what an average extension developer will do. While we are at it, some thoughts on support by email: Solving problems publicly without sharing sensitive data, of course is better because others can learn from the solution. This way you save time. Have a script for support not canned material but deviate from it whenever needed. The human touch is also valued higher. Benefit This creates more delight for your customers: More value to you. Dealing with Competition Sooner or later you will face some competition. Reacting to what your competitors do sets you back. You start to follow their actions. Innovate, optimize and provide value the way you would do if you wanted to create the best product. Provide value You can have less features than your competitor and yet have people like you. It is all in the value that you provide to the people. Think of ways you can increase that try to stay away from adding features that your competitor has. Better marketing Highlight the things your product does best. Show people how good is your product actually. Differentiate yourself by taking a clear position on some issues which will further set you apart from your competitors. Create better service Provide better support, be kind and people will start to notice it. It shows in the comments. Everybody likes to be treated good. Be nice to people and the word of mouth will spread fast. Exceed Expectations Provide more than expected and people will be delighted. As a result they will buy your

products. Some ways to create delight in users: Share it in the comments below.

Chapter 4 : Developing Successful OpenCart Extensions - OpencartNews

In this series, I am going to explain how you can build a custom theme with the popular open source e-commerce framework calendrierdelascience.com this first part, I'll explain basic structure of the OpenCart theme.

The general idea is to copy all the necessary files to the target path, and in this case, an OpenCart instance on localhost. Extract the theme file and copy. Copy the files and paste. Once extracted, look for the upload folder, and copy all the files. Now, go to your OC install directory and paste the files there and overwrite all. Make sure every files and folder from the upload directory were copied. Check the Theme folder by going to: Reference Image " in my case: Then go to step 4. Activate the theme Login to Admin Dashboard. Go to Store tab and scroll down a bit and click on Template. You should be able to find your template there. Select to activate it then Save your settings. Your theme may require additional configuration, and you may find the menu on the left block of the admin dashboard. Here is a sample from my theme. Such tool is FileZilla ftp client, which is available Windows and Linux machines. Steps is similar to those mentioned above, the only thing different is the upload procedure. To start off, download the client from this page. Then do the following. Extract your Theme file. Fire it up and fill out the necessary fields: Host Password Port " usually 21 For a quick and simple connection, just hit Quick Connect button to initiate connection. Once connected, navigate to your Theme files using the pane on the right. Right click on it then click upload from the context menu. When finished, open a browser and navigate to your OpenCart Admin Dashboard http: Activate your theme Follow the same steps mentioned in this section , and that would be it. Changing a Theme To change a theme, you simply need to upload all the required theme files. Every theme developer has different install instruction, so better read their quick start guideline. Changing a theme would only require to upload the file and activate it from the Admin Dashboard, as mentioned in this step. This is a set of files that came with your Theme. With the quickstart files, it does both at the same time. Take note of this though, the Theme only support the OC version that came with the file. You might wanna check the download section for your theme for the latest OC support. This is the basic how-to guide on installing an OpenCart theme on localhost. But in case of issues, you should first contact your theme developer and submit a ticket using their helpdesk ticketing system.

Chapter 5 : 's Top 10 Free Opencart 3 Themes | PavoThemes

Developers. These tutorials are aimed at developers needing a quick start into developing for the OpenCart platform. We break down and explain how to create a basic OpenCart module that will allow you to understand the many subsystems under the hood of OpenCart.

We have compiled a list of best open cart themes for businesses, this list includes opencart themes with free download options too. Open Cart supports many awesome templates and the look and feel of it can be customized according to any business need. You can give it a unique and really beautiful look with a good template. Open cart is one of the most popular ecommerce platforms. Its is a content management system just like WordPress. However, OpenCart is more inclined towards creation of shopping system online for your website rather than content. If you are looking to add an e-store to your profile, then OpenCart is for you. You can set up your e-commerce store in no time through OpenCart. There are a lot of professional templates and themes online that can make your store look completely professional. If you want to create a business store online with as little effort and as little trouble, then take a look at these templates below for your ease: Sullen Sullen is a minimalist template by Open Cart. The template is cross-browser compatible, and it can be used on a lot of browsers without any difficulty. The template also has SEO integration, which makes your website more compatible for web search availability. Moreover, the template is jQuery friendly and supports a lot of programming spreadsheets. The template is extremely special because it allows you to input captions under your images and products so that you can add mini descriptions to your page at any time. The navigation is completely layered and arranged in an accordion-style. It is free and can be used for commercial as well as personal purposes. The template is two-column theme, so move all your modules to left column from the right column if you want to make your theme perfect. You will end up with a perfection that is usable on any browser and version of OpenCart. Theia Theia is a free template for download from OpenCart. There is also a grid and list included with search option to make things easier. The navigation is also layered to complete the full package of template for any OpenCart user. It has great options for making your e-store a professional success. The template has a minimalist design with cross-browser compatibility. The banner in the template can also be customized easily so that you can create a wonderful shopping website in no time on any browser you want. Extreme Watches Extreme Watches is a free responsive opencart theme for download from loftytemplates. This template features a cross-browser compatibility as well as search engine optimization. Furthermore, the template is available in multiple colors and has a beautiful responsive design. The template is perfect if you have a store for watches, jewelry, or accessories. The template also has customized icons and animation effects which can be installed easily. However, the template is not allowed to be used for commercial purposes. The template features a dropdown menu for the store featuring multiple levels of categories. Moreover, it has features of SEO as well as side-box banners. The template is available in multiple versions for download such as. Carbon Carbon is a free theme from the website opencartstore. It has a multi-column layout and is fully compatible with OpenCart 1. The theme also features a grid and list view of categories as well as configurable slideshow. The template has a dark theme and can be used for any of the web stores to give a professional look instantly in no time. The template is compatible with all browsers and is an OpenCart 1.
