

DOWNLOAD PDF PROCESS SYSTEMS ANALYSIS AND CONTROL COUGHANOWR AND KOPPEL

Chapter 1 : Process Systems Analysis And Control - Donald R Coughanowr - 2nd - English

A thorough revision of the best-selling text on Process Dynamics and Control, the new edition features inclusion of the use of the digital computer in problem solving.

Editorial Advisory Board James J. Peters, Emeritus, Professor of Chemical Engineering, University of Colorado Building the Literature of a Profession Fifteen prominent chemical engineers first met in New York more than 60 years ago to plan a continuing literature for their rapidly growing profession. From Industry came such pioneer practitioners as Leo H. From the universities came such eminent educators as William H. Lewis, and Harry A. Parmelee, then editor of Chemical and Metallurgical Engineering, served as chairman and was joined subsequently by S. Kirkpatrick as consulting editor. In the report were detailed specifications for a correlated series of more than a dozen texts and reference books which have since become the McGraw-Hill Series in Chemical Engineering and which became the cornerstone of the chemical engineering curriculum. From this beginning there has evolved a series of texts surpassing by far the scope and longevity envisioned by the founding Editorial Board. The McGraw-Hill Series in Chemical Engineering stands as a unique historical record of the development of chemical engineering education and practice. Chemical engineering is a dynamic profession, and its literature continues to evolve. McGraw-Hill, with its editor, B. Clark and its consulting editors, remains committed to a publishing policy that will serve, and indeed lead, the needs of the chemical engineering profession during the years to come. The Series Bailey and Ollis: Biochemical Engineering Fundamentals Bennett and Myers: A Unified Approach Carberry: Chemical and Catalytic Reaction Engineering Constantinides: Process Systems Analysis and Control Douglas: Chemistry of Catalytic Processes Holland: Fundamentals of Multicomponent Distillation Holland and Liapis: Production and Storage King: Fundamentals of Microelectronics Processing Luyben: Applied Mathematics in Chemical Engineering Nelson: Properties of Gases and Liquids Smith, J. Chemical Engineering Kinetics Smith, J. Mass Transfer Operations Valle-Riestra: This book cannot be re-exported from the country to which it is consigned by McGraw-Hill. Copyright, by McGraw-Hill, Inc. Except as permitted under the United States Copyright Act of , no part of this publication may be reproduced or distributed in any form or by any means, or stored in a data base or retrieval system, without the prior written permission of the publisher. The editors were B. Clark and John M. The production supervisor was Louise Karam. The cover was designed by Rafael Hernandez. Project supervision was done by Publication Services. He received a Ph. He joined the faculty at Drexel University in as department head, a position he held until Before going to Drexel, he was a faculty member of the School of Chemical Engineering at Purdue University for eleven years. At Drexel and Purdue he has taught a wide variety of courses, which include material and energy balances, thermodynamics, unit operations, transport phenomena, petroleum refinery engineering, environmental engineering, chemical engineering laboratory, applied mathematics, and process dynamics and control. At Purdue, he developed a new course and laboratory in process control and collaborated with Dr. Koppel on the writing of the first edition of Process Systems Analysis and Control. His research interests include environmental engineering, diffusion with chemical reaction, and process dynamics, and control; Much. He has reported on his research in numerous publications and has received support for research projects from, the N.
