This tutorial is geared toward a cranks but does not start Condition. No Start Condition Basics In a nutshell, your 2. This basic piece of information will make you aware that you need to see if the problem is being caused by a problem in the Fuel System, or in the Ignition System, or in the Engine Mechanical system. Here are some more specifics: Ignition System The Ignition System is the one responsible for creating and delivering spark. Without spark, the engine will crank but not start. The Ignition System of the Chrysler 2. More specifically, it uses a coil pack type igtion system. In my experience, the most common component failures, of the Ignition System that cause a No Start No spark Condition are: No power to the ignition coil pack. BAD ignition coil pack. BAD crankshaft position sensor. The Ignition System components can be tested in a methodical way to find out exactly what has failed if indeed something has. Fuel System The Fuel System is the one responsible with supplying the engine with fuel. Fuel pump relay if equipped. The fuel pump can be tested to make sure it has really fried. Engine Mechanical System The engine pistons and cylinder head valves and all the other related components like: Although rare, internal engine mechanical problems can and do cause No Start Conditions. Possible internal engine problems are: OK, the list of possible things that can go wrong looks pretty long

**Chapter 2 : Diagnosis Murder - Season 6, Episode 2: Resurrection (4) - calendrierdelascience.com**

*\* [] A prayer of praise and thanksgiving to God who bestows the gift of new life and hope in baptism (new birth, 1 Pt ) through the resurrection of Jesus Christ from the dead. The new birth is a sign of an imperishable inheritance (1 Pt ), of salvation that is still in the future (to be revealed in the final time, 1 Pt ).*

URL of this page: A related blood test is partial thromboplastin time PTT. How the Test is Performed A blood sample is needed. If you are taking blood-thinning medicines, you will be watched for signs of bleeding. How to Prepare for the Test Certain medicines can change blood test results. Your health care provider will tell you if you need to stop taking any medicines before you have this test. This may include aspirin, heparin, antihistamines, and vitamin C. DO NOT stop or change your medicines without talking to your provider first. How the Test will Feel When the needle is inserted to draw blood, some people feel moderate pain. Others feel only a prick or stinging. Afterward, there may be some throbbing or slight bruising. This soon goes away. Why the Test is Performed The most common reason to perform this test is to monitor your levels when you are taking a blood-thinning medicine called warfarin. You are likely taking this medicine to prevent blood clots. Your provider will check your PT regularly. You may also need this test to: Find the cause of abnormal bleeding or bruising Check how well your liver is working Look for signs of a blood clotting or bleeding disorder Normal Results PT is measured in seconds. Most of the time, results are given as what is called INR international normalized ratio. If you are not taking blood thinning medicines, such as warfarin, the normal range for your PT results is: Ask your provider what result is right for you. Normal value ranges may vary slightly among different laboratories. Some labs use different measurements or test different samples. Talk to your provider about the meaning of your specific test results. This may be due to: Disorder in which the proteins that control blood clotting become over active disseminated intravascular coagulation. Low level of vitamin K. If you are taking warfarin to prevent clots, your provider will most likely choose to keep your INR between 2. Depending on why you are taking the blood thinner, the desired level may be different. Even when your INR stays between 2. INR results higher than 3. INR results lower than 2. A PT result that is too high or too low in someone who is taking warfarin Coumadin may be due to: The wrong dose of medicine Drinking alcohol Taking certain over-the-counter OTC medicines, vitamins, supplements, cold medicines, antibiotics, or other medicines Eating food that changes the way the blood-thinning medicine works in your body Your provider will teach you about taking warfarin Coumadin the proper way. Risks This test is often done on people who may have bleeding problems. Their risk of bleeding is slightly higher than for people without bleeding problems. Other slight risks can include: Fainting or feeling lightheaded Hematoma blood accumulating under the skin Infection a slight risk any time the skin is broken Multiple punctures to locate veins Alternative Names PT; Pro-time; Anticoagulant-prothrombin time; Clotting time: Laboratory Tests and Diagnostic Procedures. Review provided by VeriMed Healthcare Network.
