

## Chapter 1 : calendrierdelascience.com | Red-Eyed Tree Frog

*Red-Eyed Tree Frog by Joy Cowley with pictures taken by famous photographer Nic Bishop is a great nonfiction piece of work. It tells the story of a tree frog from the start of his day to the end.*

Their green colouring and big red eyes are no accidents; the red eyed tree frog has evolved to fit a particular niche in the rainforest ecosystem. Like many creatures, there is more to the Red eyed tree frog than meets the eye. One survival trick in particular is amazing! Read on to find out more about this, and other awesome red eyed tree frog facts – Click to see more animals in the Active Wild Online Zoo Red Eyed Tree Frog Information Discover some amazing red eyed tree frog facts below. The scientific name for a red eyed tree frog is *Agalychnis callidryas*. Like all frogs, Red eyed tree frogs are amphibians. Red eyed tree frogs are in the Hylidae family of frogs. However, not all Hylids members of the Hylidae family actually live in trees. Red eyed tree frogs have bright, leaf-green bodies, with yellow and blue stripes running down their sides. Their characteristic big, red, forward-facing eyes dominate their heads. The insides of their legs and undersides are orange. They are quite small frogs, measuring from 1 inch to 2. Red eyed tree frogs have sticky pads on the ends of their fingers and toes, which are used to grip onto twigs and branches. The pads secrete a sticky mucus that helps holds the frog onto smooth surfaces. Watch the frogs in action in the video below: Red eyed tree frogs are nocturnal, which means they are active at night. During the day, red eyed tree frogs curl up so that their bright colours are hidden, and they look completely green from the outside. This protects them from predators. Why The Red Eyes? During the day, red eyed tree frogs hide among the leaves. However, if they are disturbed, they open their eyes and display their bright colours. Potential predators may be momentarily disturbed, confused, or frightened by the sudden appearance of these bright colours, giving the frog time to hop away. Red eyed tree frogs startle predators with their vivid colours. Red eyed tree frogs are found throughout Central America, and also in Mexico. Red Eyed Tree Frog Facts: Habitat Red eyed tree frogs live near rivers, streams and ponds in humid forests and lowlands. Red eyed tree frogs are insectivores, which means they eat insects. They catch crickets, flies, moths and other insects with their sticky tongue, and swallow their prey whole. During the mating season, male red eyed tree frogs wrestle with one another for the right to mate. They have also been known to shake branches in order to deter other males and to attract females. During mating, the male climbs on top of the female, grabbing her with his arms under her armpits. He fertilises the eggs as they are laid. Red eyed tree frogs lay clutches of around 40 eggs. The eggs hatch after 6 to 7 days, and the tadpoles drop down into the water. If a change in the environment is detected that signifies a threat e. Red eyed tree frog tadpoles remain in the water until they change into frogs. This can take between 3 weeks to several months. Red eyed tree frog tadpoles risk predation by fish, birds and other insects. The lifespan of a red eyed tree frog is around 5 years. *Litoria chloris*, an Australian frog species, also has this name. When they first turn into adult frogs, red eyed tree frogs are brown with yellow eyes. This involves the frog flashing its bright colours at the predator in order to confuse or frighten it, while the frog makes its escape. Red eyed tree frog eggs can hatch early if disturbed by a predator approaches. The eggs can even tell between a genuine threat and a normal disturbance such as strong rain or wind. Red eyed tree frogs are not an IUCN endangered species. However, their population is decreasing due to deforestation and habitat loss. Red eyed tree frogs are native to the following countries: Red eye tree frogs are often used in advertising, and are often symbolic of the rainforest. Frogs begin to mate at around 3 years old. During the day, red eyed tree frogs hide among the leaves, keeping their striking colours hidden. Click the image to find out about more rainforest animals. **Chapter 2 : Red-Eyed Tree Frog Â« Book-A-Day Almanac**

*Red-Eyed Tree Frog is an excellent first reader about the American tropics. It tells a story about the realistic food chain relationships of the red-eyed tree frog and outstanding photographs of Amazon animals.*

Not that there is anything wrong with the text of this book. Ellie My son loved this book. Of course, he was obsessed with frogs at the time. The words, not so much. But for me, happy memories of many! It tells the story of a tree frog from the start of his day to the end. The book gives insight into a tree frogs daily life and has exquisite pictures to go along with the story. The book introduces you to other rain forest animals that a red-eyed tree frog may encounter on any given day. There are a few double page spreads Many different types of animals, like snakes, eat red-eyed tree frogs. These frogs have to be cautious and adapt accordingly to their environment. These frogs are beautiful and can jump far distances. This book is very informative. This is not my favorite book but it has nice pictures! This could be used in the classroom when discussing the rain forest. Joy This is a nice nonfiction picture book about the Red-eyed tree frog. Unlike many nonfiction books, it has a bit of a storyline. The illustrations are nice colorful photographs of the frog. The Red-eyed tree frog is nocturnal so when it wakes up at night, it is hungry. It goes out in search for food but it cannot quite find the right thing to eat until the end. Lindsay Nic Bishop, my new favorite non-fiction guy, shot the illustrations for this preschool non-fiction book about a night in the rainforest with a tree frog. Pynteya Bate My students and I really like this book!! It has basic information about the frog, how it hides from the predators, what frog eats, and when it sleeps. Beautiful real photographs compliment the story and make it more as an adventure into the world of Red-eyed frog. Beverly I love this book, and have read it several times. The photos are magnificent, and capture small details perfectly. ABC The photos in this book are wonderful. Have you every seen a frog with its eyes closed? How about with one eye closed and one eye open? Kathryn This little guy is only two inches long. The book is all done in sharp close-up photography so he looks much bigger. My oh my those eyes Sixteen bestselling titles available now! NatureIn a tropical rain forest in Central America, a red-eyed tree frog spends the night looking for food while avoiding potential predators. Further information on red-eyed tree frogs is provided in the back of the book. An eye-catching introduction to a nocturnal amphibian who is a master of disguise when ready for bed. I really appreciate the simple text that makes this great for preschool but also usable for a short nonfiction read t Lea Fabrizzi I thought this book was an educational way to incorporate facts about the red eyed tree frog. I think it is smart for writers like Joy Cowley to write picture books with facts for young readers so children can learn more about the subject that is trying to be taught. I also like how the pictures are realistic but still good for children! Parents will appreciate the last couple pages with more facts about the red-eyed tree frogs along with a life-size photo of one. For me this was more of a three star book, but, it definitely would s Jenny A simple introduction to the red-eyed tree frog Lynn Davidson This is a brief, interesting story of a red-eyed tree frog. Illustrated in amazing photos. More information on the back two pages. Kristine This book would be great for a unit over ecosystems, there are different animals in the pictures, and the rain forest. Jessica Great photos and did you know in the back. It is an immersion book for our writing program. Frankly, I was rather surprised at how quickly a Melba Deoleo The red eye tree frog lives in the rain forest in Central America, it sleeps during the day and hunts for food at night. This book has great pictures, it not only tells us about the frog in writing, but with its realistic pictures as well. It shows us how the red tree frog has to hide and try to escape predators, such as a big snake and it also shows us how the red tree frog becomes the predator when it comes times for him to find his meal. Sally Deem This is the colorful story of the red eyed tree frog and his survival in the rain forest. The tree frog escapes the grasp of the snake and eventually finds the perfect meal, a small moth, before falling asleep as the sun rises. The best part about this story is the beautiful photographs of the wildlife in He eventually comes across a snake that he has to jump and get away from. He finds a little moth to eat and finally goes back to sleep. This story can be used to discuss animal habitats, specifically the rainforest, and also to talk about red-eyed tr Sarah Sammis My son and I are fans of nature photography. The text covers things like what frogs eat and what creatures eat frogs. Alicia Evans This book was a wonderful addition to my frog storytime. At first, I just expected to add a
