Volume Reel - Wisconsin Federal Population Census Schedules - Dane (cont'd: ED 77, sheet 3-end) and Dodge (part: EDS , sheet 4) Counties "Photographed in microfilm lab, Bureau of Census."

Box , Bend, OR Street address: Critics, however, condemned the decision, arguing that it was misleading to approve ella as a contraceptive because the drug could also be used to cause abortions. Ella can reduce the chances of becoming pregnant after unprotected sex by about two-thirds for at least hours, studies have shown. The only other emergency contraceptive on the market, the so-called morning-after pill sold as Plan B, is significantly less effective, begins to lose its effectiveness almost immediately and becomes ineffective after 72 hours. Supporters and opponents both said the decision marked the clearest evidence of a shift in the influence of political ideology at the FDA. The last time the FDA considered an emergency contraceptive "making Plan B available without a prescription" the decision became mired in controversy because of similar concerns by anti-abortion activists. Plan B was eventually approved for sale to women 18 and older without a prescription, but only after repeated delays. Ella, which was approved in Europe last year and is available in at least 22 countries, was unanimously endorsed by an FDA advisory committee less than a month ago. Women will need a prescription for ella but could keep a supply at home. For their part, critics said the decision reflected the abortion-rights stance of the Obama administration. The government announced quarter-on-quarter economic growth of 2. And it will reinforce the widespread conviction among policymakers that they handled the financial crisis and the painful recession that followed it far better than the United States, which, they never hesitate to remind, brought the world into this crisis. A vast expansion of a program paying to keep workers employed, rather than dealing with them once they lost their jobs, was the most direct step taken in the heat of the crisis. Germans steered clear of the debt-fueled consumption boom that many believe contributed to the financial crisis. During the recession, Chancellor Angela Merkel resisted the palliative of government spending that the United States and some European partners felt was crucial to restoring growth. Some critics in Europe say that confidence veered toward hubris in the contentious debate this year over shoring up the Greek government and restoring confidence in the troubled euro. In the process, the relationship between France and Germany has become fraught and mistrustful, calling into question the future of the project of European integration. As the latest numbers show, Germany is outproducing its neighbors by wider and wider margins, raising fears of a twospeed Europe that could render the common regional currency unstable. Waters used the news conference to deny any connection with alleged ethics violations. The House ethics committee has accused Waters of intervening on behalf of OneUnited, a Massachusetts bank her husband still owns stock in. Relief well Stabbing suspect still needed in U. But what drove Elias Abuelazam remains a mystery: Relatives describe a shy man from a respected family who had recently become despondent. Profilers say the case is baffling because, despite five deaths, murder did not appear to be the goal. Abuelazam is suspected of attacking people in Michigan, Ohio and Virginia, leaving 13 people wounded in addition to the dead. He was arrested Wednesday in Atlanta as he prepared to board a flight to his native Israel, where relatives said he lived until his family sent him to the U. The year-old man appeared briefly Friday in an Atlanta courtroom and agreed to return to Michigan to face an attempted murder charge in one of the attacks "a July 27 stabbing in Flint that put the victim in the hospital for a week. Authorities said more charges were expected in the three states. Israeli police said Abuelazam was a suspect in a stabbing attack early this year, although charges were never pressed. A family member in this

DODGE (PART: EDS 1-9, SHEET 4 COUNTIES**

poverty-stricken community said Abuelazam had become unhappy about his personal life in recent months. Retired Coast Guard Adm. A four-hour pressure test was conducted to figure out whether oil was still flowing freely into the outer ring of the well bore. He said that when his cousin last visited earlier this year, he was tense, unhappy and unsure what to do with his life. The company, Rosatom, said technicians would move tons of low-enriched uranium fuel from a storage site into the reactor Aug. The company said a ceremony was planned, to be attended by senior Iranian and Russian officials. Cascade, Sisters License ons development. Iran says its nuclear program is intended to generate electricity and produce medical isotopes, not to make a nuclear weapon. The construction and startup of the plant, near Bushehr, a city in southern Iran, have been plagued by dozens of delays since Russia took over the work there in the mids. Often, delays for ostensibly technical reasons have come just days after Russian leaders made statements critical of Iran. Tehran has said that the plant has been ready for startup since February , when the reactor core was successfully tested. The principle that people of all faiths are welcome in this country, and will not be treated differently by their government, is essential to who we are. Bush hosted iftars annually. The internal Pentagon savings estimate, disclosed by Gates in an inter- view this week, represents a small slice of the overall defense budget, but it is a big part of his effort to find savings and to stave off calls in Congress for deep cuts in military spending to reduce the federal deficit. The request to prevent the resumption of same-sex marriages in California next week is being considered by a three-judge panel of the 9th U. S Circuit Court of Appeals. Two of the judges were appointed by Democrats, one by a Republican. The panel has ordered all arguments to be filed by Monday. If the panel permits gay marriages to resume Wednesday, attorneys for Proposition 8 said they would seek a permanent hold from U. Kennedy, considered a swing vote, could refer the matter to the full court. Timothy Duy, director of the Oregon Economic Forum at the University of Oregon, said the amount of waste is one way to track how the economy is faring in real time. If the amount of waste were to rise before the number of jobs increases, people could reasonably expect to see job growth because jobs typically lag behind other economic indicators, he said. Garbage is a concurrent indicator, however, meaning it signals economic activity in real time and is not a predictive, or leading, indicator, said Duy and State Economist Tom Potiowsky. This fiscal year, the Department of Solid Waste budgeted for 5 percent less garbage compared with last year. Factors that could affect the reliability of garbage as an economic indicator include whether people are recycling a greater portion of their refuse, and whether increases in garbage rates led to more illegal dumping, economists said. But recycling and dumping have also declined, although data is not available as recently as for county garbage. The latest county-level recycling information available from the Department of Environmental Quality County shows the tons of material recycled in Deschutes County peaked at 75, in , then declined to 65, in . Illegal dumping on lands in Oregon controlled by the Bureau of Land Management decreased between and , according to public affairs specialist Pam Robbins. And Bend Code Enforcement Officer James Goff said there has not been a large increase in complaints about people keeping solid waste on their properties. One category of waste tied directly to the economy is construction and demolition debris, Schimke said. He estimated that category accounted for 60 to 65 percent of waste entering the landfill in , and it dropped dramatically in . So far, Bailey said construction disposal business has not increased, and both residential and commercial customers have downsized to smaller containers. Mike Riley, the director of The Environmental Center and a former member of a nonprofit that handled Deschutes County recycling in the s and s, agreed with others who said the amount of waste ebbs and flows with the economy. The environmental impact of material goods is much greater than the space they occupy at a landfill, and most of the environmental effects are generated before a product hits stores — for example, during production and transport. An upside is that the county landfill is filling up more slowly, Schimke said. In , county staff predicted Knott Landfill could take in waste until . That number was revised up by two to five years in , when the amount of garbage peaked. Now, Schimke believes the landfill will last until or perhaps even longer, if the amount of waste continues to drop. That is a benefit to taxpayers and garbage customers, since the next landfill will likely be farther away, and transporting materials will cost more. Yet the county also had to close

**DOWNLOAD PDF REEL 1422. DANE (CONTD: ED 77, SHEET 3-END),
DODGE (PART: EDS 1-9, SHEET 4 COUNTIES)**

Knott Landfill on Sundays and laid off one employee to save money, Schimke said. And Riley said a decline in waste due to a weak economy is not necessarily a good thing. Radioactive materials were removed earlier this month from parts of the facility exposed to fire risk. People have to make a living and take care of their families. Certainly, as an organization, we think everyone needs to pay attention to how we consume, in good times and bad times. Levitt, a rabbi, urged Khan to focus on practical matters like a decent wedding hall and stroller parking. They went ahead with their first public presentation of the project — a voluntary appearance at a community board meeting in Lower Manhattan — just after an American Muslim, Faisal Shahzad, was arrested for planting a car bomb in Times Square. The future of the center — organizers say it will have a mosque, but its 15 floors will be mainly for other functions — has become grist for talk radio, cable television and election fights across the country. It has brought us together. But it also shows how much work we have to do. Feisal is in Fred R. Malaysia and could not be reached for comment. A few years later, el-Gamal, a developer whose Egyptian father was a Chemical Bank executive, asked the imam to perform his wedding. El-Gamal, who headed SoHo Properties, agreed around to join the effort. In , he bought two adjacent buildings on Park Place, where the imam began holding services. Only then did the organizers start reaching out more widely about their idea. In , Debbie Almontaser, a Muslim educator, had been forced to resign as the principal of an Arabic-language public school in Brooklyn after such groups helped paint her as supporting terrorism. A New York Times article in December about the project drew little negative comment. In February, the staff of Scott Stringer, the Manhattan borough president, who liked the idea, suggested the organizers present it to Community Board 1, the largely advisory body that represents the neighborhood. The board gave a unanimous yes. The next day, the uproar began. The organizers were shocked. Many supporters say that their failure to imagine the backlash left them ill prepared to defuse it.

Chapter 2 : Bulletin Daily Paper 08/14/10 by Western Communications, Inc. - Issuu

Volume Reel - Wisconsin Federal Population Census Schedules - Winnebago (cont'd: ED , sheet 11) and Wood Counties.

Environmental Protection Agency Washington, D. Environmental Protection Agency and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendations for use. This proceedings embodies that concept: EPA supported the publication, but had no hand in the conference itself: This Society represents the best expression of a cooperative approach to solving environmental problems between the private sector and the government. Less than 8 cents per dollar have been spent on diagnostic feasibility studies, and only 5. With most of the money being used to clean up lakes, approximately 86 projects are either complete or nearing completion. They were about equally distributed between Phase I feasibility studies and implementation projects. All those awards were for existing Phase II projects and were limited to the five criteria for grant awards directed-by Congress. Completion of Phase II projects is of highest priority. Americans continue to demonstrate their concern about the condition of their lakes. They are saying yes to bond referenda to clean up their lakes; and they are raising money in their own communities to help get rid of silt and weeds, and reduce eutrophication of their lakes. The Clean Lakes Program was built on the premise that the citizens of this country, if informed of the facts, would act in their own best interests, and pay their own way. And the Federal government has just about fulfilled its mission. The program is now in the operational phase and the future lies with the local citizens and their desire to continue this successful program for their own lakes. We are proud to have supported its publication. We believe this proceedings establishes a standard of excellence for the private sector, and certainly a pattern of cooperation between private association and the Federal government. Lakes resources are irreplaceable. Once they are gone, they are gone. They also seem to have a threshold beyond which it is no longer possible to technologically or economically return them to a productive quality. How many can we lose before we affect the essential ecological function they perform? It would be nice to protect and improve the quality of all our lake resources, but we cannot. Conventional pollution controls are frequently insufficient to protect lakes or correct their degraded condition. Nonpoint sources of pollution carrying toxics, pesticides, heavy metals, sediment, and urban drainage often contribute greater than 50 percent of the pollution loading. Controlling these sources will require further development and implementation of unconventional controls, particularly best management practices. Citizen initiative is the greatest moderator in defining lake restoration quality. We truly are "a government of the people, by the people, and for the people. I firmly believe that given sufficient and accurate information to deal with a problem and encouragement and assistance in handling it, people will help themselves. And I have found they really want to in the case of lake restoration. I have also found that it takes government, at all levels, to provide that critical information and assistance. In lake restoration, he has to make his elected officials know what his lake quality problems are and that he needs their support to solve them. The citizen must 1 help design local ordinances and zoning regulations, 2 encourage the use of greenways and nonstructural measures to control and treat nonpoint sources of pollution, 3 ensure that new urban drainage outfalls and refurbished old ones adequately treat urban runoff before it is discharged to streams and lakes, and 4 ensure that best management practices are required and used where applicable. Finally, citizens must insist that laws are enacted to authorize local, State, and Federal jurisdictions to handle lake pollution control and restoration programs. And after they are enacted, they must make sure these laws remain viable. The goal for the U. We need to make this happen in all the States that have lake resources. EPA prepared a number of publications from through that address where we are with lake restoration and what remains to be done. This volume is the third in the series of proceedings documents on lake restoration that discuss management approaches, the science of lakes, modeling

**DOWNLOAD PDF REEL 1422. DANE (CONTD: ED 77, SHEET 3-END),
DODGE (PART: EDS 1-9, SHEET 4 COUNTIES)**

capabilities, and engineering techniques. The goal was to develop standardized information on restorative techniques so their effectiveness might be assessed and improved. Without these comparative data, it may be impossible to improve lake restoration capabilities. All who manage, conduct or support lake restoration projects should use these protocols. Those who control the funds for lake work should demand that this standardized gathering and recording of information be continued. We have come a long way in making lake quality a national priority in the United States, but there is much to do! We took a substantial step on Sept. Our goal is to channel their concerns into a force that will 1 encourage governments to understand the importance of lakes and their problems; 2 make the protection and enhancement of lake resources a national, State, provincial, and local priority; 3 ensure appropriate laws and regulations are available to control pollution to these resources; and 4 ensure that adequate financial and technological resources are available to control pollution to our lakes, and upgrade those particularly needed and wanted by the general public. The challenge is clearly there. We can meet this challenge and we must meet it head on, by working together to make lake restoration and protection a reality on this continent. Restoration of Lake Wononscopomuc, Connecticut 46 ft W. Smith Cyanophage; History and Likelihood as a Control Dennis Cooks Lake Restoration Criteria: Their Benefits and Unique Problems Diane L Conyers, G. Donald Porcella, Tetra Tech, Inc. Alternatives to Nutrient Control: Frazier Cover art by Patricia J. Lawrence Great Lakes covers three quarters of a million square kilometers with a 2: At the beginning of the 19th century the basin was inhabited by about , persons with an average D-index ratio of technological to physiological energy consumption probably in the range of 0,5 to 2. In , the basin was inhabited by about 38,, persons with an average D-index of approximately 80 to 90, See Valientyne for explanation of the concept of demophora and D-index. A succession of costly problems appeared in the basin over this time interval: These problems first appeared in isolated localities, later shifted from streams to harbors and embayments, and in many cases spread throughout major segments of the Great Lakes. Recognizing this, the governments of the United States and Canada directed the International Joint Commission to investigate and report on the nature and extent of the problems, causes, and remedial measures, The technical report to the Commission from the International Water Pollution Boards for Lakes Erie and Ontario identified eutrophication as a problem of major concern. To control eutrophication the Boards recommended reducing the concentrations of phosphate in detergents and removing phosphate by chemical treatment at sewage treatment plants. This control program was based on a global review of the causes and control of eutrophication prepared by R. A. Vollenweider under the auspices of the Organization for Economic Cooperation and Development. Vollenweider showed that direct relationships existed between the loading rates of phosphorus and nitrogen compounds to lakes and the degree of eutrophication. The focus on phosphorus for control was based on experimental and observational evidence showing that the supply of phosphorus could be made to limit plant growth in the lower Great Lakes by removing phosphorus from nutrient-rich sources, such as detergents and effluents from sewage treatment plants. To illustrate the supposed benefits of constant demophoric growth Dr. Valtentyne began the talk by pouring 1, 2, 4 and 8 shots of whiskey into four glasses, drinking one glass at the beginning of each of the four sections. Valientyne declined to answer a question raised at the end of his talk about the chemical nature of the liquid in the bottle. By early , only Ohio and Pennsylvania permitted high-phosphate detergents. By , most municipalities in the Great Lakes basin with populations exceeding 10, had reduced the concentration of phosphorus in sewage effluents to levels less than 1. As a result of these measures, municipal phosphorus loads to Lake Ontario were reduced from estimated values of 9, tonnes in to 2, tonnes in ; and loads to Lake Erie from estimated values of 15, tonnes in to 3, tonnes in Great Lakes Water Qual. Board, , By it became clear that the program of phosphorus control had achieved the desired effect. Concentrations of soluble reactive phosphate in Lake Ontario were approaching levels predicted a decade earlier on the basis of a program of phosphorus control as shown in Figure 1 Dobson, Similar, though less marked changes were discernible in data for Lake Erie. There was also evidence of decreased phytoplankton chlorophyll and increased transparency, but the trends were not well marked. The full story of the adjustment of the lower

**DOWNLOAD PDF REEL 1422. DANE (CONTD: ED 77, SHEET 3-END),
DODGE (PART: EDS 1-9, SHEET 4 COUNTIES)**

Great Lakes to the control measures has yet to be told; nevertheless, It is already beginning to show signs of becoming a success story. On the other hand, the solution was piecemeal rather than ecological. Recycling of phosphorus on land was practiced at only a few locations in the basin. Also, even before 69 70 71 72 73 74 75 76 77 78 79 Year 81 Figure 1. From Dobson with previously unpublished data for also from Dobson. This seemingly endless succession of problems caused the Great Lakes Research Advisory Board to alert the International Joint Commission in , and more comprehensively in , to the futility of a piecemeal approach to management. Termed the ecosystem approach, it called for an evaluation of social, economic, and environmental interests. Human health was accented as an issue; jobs and cars were in the ecosystem. It described the basis for politics in an ecosystem context, rather than environment in a political context. Perhaps more than any other factor, toxic substances illustrated the necessity of an ecosystem approach to management. The extent to which these technological chemicals were present in human tissues was poorly known at the time, but the fact that they were in the Great Lakes Basin ecosystem made it only a matter of time before they came into equilibrium with the human population. The Board warned the Commission that in the absence of an integrative and anticipatory approach to problem-solving, new problems were bound to emerge. The nature, time, and place of the next problem could not be predicted, but the appearance of such a problem was certain under conditions of continuing demographic growth. The first member of a class of new and unexpected problems emerged within 3 weeks of that prediction: Toxic industrial chemicals were seeping out of corroded containers buried decades earlier in the naive belief that they had been disposed of "for good. As limnologists, we are used to defining ecosystems as lakes, segments of streams, or drainage basins. But, we can also speak of personal ecosystems "me" plus everything outside me with which "I" interact and municipalities, States, Provinces, Nations as ecosystems delineated by political boundaries. The ecosystem concept was developed originally by ecologists. Their studies were limited to tracts of land or bodies of water small enough to be studied by single persons or groups of students under the direction of a single professor. Now, in regions of high demographic activity, ecosystem management has become a necessity on scales far beyond the capability of ecologists to resolve. Multibillion dollar problems in the Great Lakes basin such as eutrophication, toxic chemicals in human food chains, and acid rain show this clearly. Ecosystem accounting in the Great Lakes basin has, of necessity, fallen into the governmental domain.

Chapter 4 : Lake Restoration, Protection, and Management

Census (reels) These microfilm records from the National Archives were placed on the Internet Archive by the Allen County Library Genealogy Center.

Celebrating 60 years of serving you! Library hours are 9 a. Tuesday to Thursday, 9 a. The library is closed on Sundays and county holidays. For more information, call Speaker Don Marsh will talk about U. Navy demolition teams underwater in World War II. It is free and open to the public. The group meets in the evening with childcare provided. All women are welcome. The contest is being offered in conjunction with the Teen Summer Reading Program. Show off your costuming skills while posing in character! All costumes must be original except for shoes and accessories. Characters must be established from an actual cartoon, anime, manga, comic book, movie, novel or video game. Bring a reference photo for your character. Prizes will be awarded for first, second and third place. For more information, contact Contact the pantry at or powhatanvafoodpantry gmail. Dinner will be served followed by a program and a brief meeting. They are a community service organization dedicated to our county. For more information call Larry Cary at John Neumann Catholic Church. The park has a unique history, including the era of the Monacan Indians and the French Huguenots. To celebrate this history, the park will offer several programs emphasizing the cultural influences of these historic groups. We will be serving up a tasty treat for people to enjoy as they travel back in time. Meet at River Launch A. Participants will meet at the Playground area. Participants will also discuss the use of dugout canoes by the Monacan Indians and how it has evolved into the modern canoe we know today. Meet at the River Launch A. Pet food donations are taken to Powhatan Animal Control and animal shelters in surrounding counties. Contact Mary Ellen Boyd at Find out what they have been doing, and where their next ride or event will be. For more information call Tom Barnes at or Frank Vaughn at The Supper Table serves those in need and the elderly of Powhatan County. For further information and if you need transportation to and from the Fair Building, contact Mamie Scott at Free food and fellowship is provided. Beginning at 2 p. Participants will read a story about a famous artist and get messy completing their own special artwork. Contact HELP or go to www. The program will not be held on July 4 because the library will be closed for the Independence Day holiday. No registration is required for Tinker Tuesdays. Be sure to stop by the library to pick up a summer reading flyer or visit www. Call the library at Contact Ruth Boatwright at People can bring their own project to work on, such as knitting, crochet, needlepoint, beading, cross stitch and embroidery. Handcrafters of all ages and experience levels are welcome. All women are invited to join. E encourages Christian development of ladies in the church and community through missions, spiritual outreach, community involvement, and Christian fellowship. Register at the circulation desk to claim your entry prize. Then, over the summer as you read books and magazines, ask a librarian for an entry form to enter the July and August drawings. Put your name and phone number on the entry form and drop it in the box. The July prize is a Friends of the Library tote bag. The grand prize drawing for a Kindle Fire will be held in August. For questions or help with online registration, contact the library, located at Mann Road Powhatan, at It will be closed weekdays and instead be open from 9 a. Saturdays and 1 to 5 p. The store will close from July 3 to Aug. Donations accepted anytime but preferably during open hours. The second hand store sells clothes, shoes, books, movies, CDs, housewares, linens, toys, small electronics, games and more. Contact Rachel Grosse at or or Dave Johnson at In addition to the constant need for donated individual-sized food items, adults or students are needed to double bag the plastic bags the group packs in, which will help expedite the packing process. This job can be done at home if people pick up bags at the pantry office. The group also needs help breaking down boxes for recycling. These are great jobs for students looking for community hours. Contact Gloria at For more information on volunteering, contact Liz Benton at or angels aol. Find safety, options and support. The group is free, confidential and childcare is available. Narconon offers free addiction counseling, assessments, and referral services to rehabilitation centers nationwide. Call or log on to www. The

DODGE (PART: EDS 1-9, SHEET 4 COUNTIES)**

program will not be held on July 3 because the library will be closed for the Independence Day holiday. No registration is required. You can also like our Facebook page to stay in the loop on all the latest library news. Look for participants in the garden on the following Thursdays: June 22, notill gardening, rain barrels and water conservation; July 6, harvesting vegetables and what to do with them; Aug. Feel free to check it out, or pull some weeds, anytime you happen to be in the neighborhood, or call the office for more information, Adults and children are welcome. June 22, July 6, July 20, August 3 and August The kickoff discussion will focus on Anne of Green Gables. Future book titles will be chosen as a group. Contact the library at There is no charge, but donations will be accepted at the game to support a different local nonprofit group at each show. Arrive early and bring chairs and blankets. This event is open to the public and all are encouraged to attend. Ham radio operators will be on-hand to answer questions about the electronics, physics, meteorology, and numerous other scientific aspects of how someone can get involved in ham radio. Register online at pmchurch. This monthly 4-H Farm to Table program takes place after school from 9 a. Youth will get to enjoy learning how to cook yeast bread and cheese; gain hands-on gardening basics; visit several area farms and participate in community service projects. Based on the Junior Master Gardener curriculum, youth in grades 5 and up will also create healthy, nutritious recipes and participate in heartpumping physical activity. Contact the office at or email chowland vt. Some material may be inappropriate for children. When they are reunited in London, they accidentally fall for each other in the middle of a risky mission. They hope to leave all the duplicity in the past; however, mistrust and uncertainty place their wartime marriage in danger. The spouses are pitted against each other in a high stakes test of loyalty, identity and love. This film is rated R. Refreshments are provided, courtesy of the Friends of the Powhatan Library. Contact the Powhatan Public Library at or visit www. July 6, harvesting vegetables and what to do with them; Aug. Fax submissions to calendar to email to news powhatan.
