### Chapter 1 : Open Research Online Items where Year is - Open Research Online

*Overview: Casinos: Organization and Culture is a fascinating look at the world inside the casino building. The first section of the book describes the organizational structure of casino facilities with information on different casino departments and their functions and the culture within the casino hotel.*

Data analysis from a survey provide evidence that these variables matter for political engagement, and, most importantly, that in the context of societies in crisis these online practices result in increased expressive political participation and associational membership. Meth in the Midwest: Space and time frames on methamphetamine, an illegal, highly addictive drug problematic in rural areas of the Midwest, were compared in eight rural and urban newspapers from four high-meth states. Findings indicate the newspaper types framed the drug problem differently, though both tended to frame it largely as an individual, present-time crime problem. Implications for future research are discussed. A hierarchical cluster and concept mapping procedures identified eight major frames used by student and main line press. Using an experimental design method, this study manipulated the source descriptors of a Weblog author and had participants rate the overall credibility of the entry. While male authors were deemed more credible than female authors in a main effect, that difference disappeared among blog users. The relationship between gender cues and credibility was moderated by blog usage. As scholars have long indicated concern regarding the disaffect youth voters, this study explored the extent to which these promotions might influence decision making variables which predict voting behavior. Findings indicated that celebrity involvement predicted lower levels of apathy and complacency and higher levels of involvement and self-efficacy. This study suggests that that thesis may be worth revisiting. A total of stories appearing in 15 metropolitan newspapers from to were analyzed. Stories reported partisan debate rather than in-depth discussion of issues. These findings are supported by other research regarding media coverage of health risks. Focus is put on the degree to which news content from each community highlight the relational treatment of citizens by authorities, as well the degree to content suggests that citizens can have a voice in the cancer investigation of their community. *Toward a More Critical Thinking Journalist: Respondents indicated more time spent multitasking as the time with media increased, showing support for the combined use of the Internet and traditional media. The theory of uses and gratification is considered as multitasking presents challenges to one of its basic components. What Makes a Protester? However, a limitation of this work is that alternative forms of both media and participation have largely been ignored. Research under the protest paradigm indicates that media treat protests critically, suggesting mainstream media might stifle alternative participation. Findings suggest journalists missed an opportunity to include sources who would fill a media advocacy role by discussing policy and prevention. However, the proportion of Israeli favorite shows and favorite characters were predictors of national pride. The researchers used a survey to examine these relationships in young students at a large southeastern university within the theoretical framework of cultivation. The survey targeted first-semester college freshmen. Peter Jennings received positive coverage and was especially noted for his professionalism. In particular, there is tentative evidence that the hyperlink structure of online newspapers, for example, can promote a more in-depth understanding of political issues than traditional news media. However, investigation regarding the amount of exposure to such advertising and the form in which the advertising is presented remains scant. This study investigates how researchers can resurrect lapsed citations, comparing two retrieval methods—online archives and search engines. The Wayback Machine and Google were used to retrieve missing online citations from six leading mass communication journals. Analysis shows that the Wayback Machine was more efficient, suggesting archives are a better method for citation retrieval than search engines. Implications of these findings for future scholars are discussed. Utilizing a national RDD survey, we articulate a model of media credibility emphasizing the importance of controversy and elite claims of media bias. Using survey data from university staff, the study found that although frequency of viewing was not related to motivations to*

## CHRIS ROBERTS AND MARYANN CONRAD

respond without prejudice, motives for watching local television news were. The study discusses the implications in relation to efforts to reduce prejudice. A survey of college students demonstrates that viewing of The Daily Show with Jon Stewart is positively related to current events knowledge. Logit models are employed to assess the newly-released NES data, and particular concern is paid to the inconclusive relationship between media variables and partisanship, a conventionally consistent non-communication predictor of voting behavior. Their independent effects on voter turnout are also discussed respectively. Little research has tackled the complexity of this content, but framing research demonstrates that values are an easily accessible heuristic for framing arguments. We examined newspaper forum articles on health policy issues for the presence and complexity of values. Significant differences were found by article type and topic. Just Do It or Not? With the introduction of technologies such as television, children seemingly spend increasingly more leisure time with new media than in physical activity. Therefore, the goal of this study will examine the relationship between television viewing, sports and exercise participation, and Body Mass Index BMI. Hitting the Tween Scene: Framing People in Crises. Drawing on the social psychological perspectives on group membership Tajfel and Turner, , the study expected that emotional experiences, relational attitudes, and non-emotional, non-relational characters of people should be the aspects focused on by news framing. For Democracy and the Bottom Line: Overall, respondents favored ideological goals providing a forum for public debate over practical and business-related goals. The difference was statistically significant. Smaller papers embraced business-related goals significantly more than larger papers. Publication schedule daily versus non-daily was not a significant factor. Something Ventured, Something Gained: Results of this study show different roles of online media in connection to political discussion. While blog reliance has little influence on political activity and political knowledge, it increases feeling of political involvement. Partisanship and News Credibility: In so doing, the study integrated the audience-centered and source-centered streams of research on news credibility. It found that shared beliefs in free enterprise, freedom from government interference, individualism, self-responsibility, and class mobility characterized both discourse and ideology, and subverted notions of difference along class, race and gender lines. Health Information and Hurricane Katrina: Due to the severity of the conditions, many questions were raised regarding health concerns. The exploratory study examines the content of health-related articles available on the web sites for print and television news outlets. A mental-model of these concerns clearly delineates the somewhat illogical fears and interests over the six-week period that occurred during this natural disaster of unprecedented size. Television and magazine exposure within different genres was measured in relation to their perceptions of ideal body images as well as body image dissatisfaction. Significant differences in body image dissatisfaction were identified based on the amount of TV reality show viewing as well as beauty and celebrity magazine reading. Also, there was a significant gender differences in their perceived body dissatisfaction. It was found that the messages with the governmental agency were rated to be more interesting, credible, effective, realistic, and persuasive than the same messages presented by the tobacco company, specifically among college risk-takers. Study examined variance in discursive opportunity structure by group resources, communication strategies and amount of news coverage. Surveys of 37 environmental groups and analysis of news coverage conducted. Also, communication strategies were strongly related to extent of news coverage. Implications for theory discussed. Findings from a content analysis of Colorado newspapers and non-Colorado media showed that articles from the local press more strongly reflected de-contextualization and absolutism as dimensions of anti-intellectualism. Two Faces of Eva: Health Communication and Social Ecology: Considering problem identification, planning, implementation and evaluation, we confirm that arousing a public is separate from sustaining interest over time. We conclude that the social ecology approach incorporating target populations and broader communities is the best way to ensure public health communication campaign success. Specifically, the researcher analyzes news coverage of four recent environmental controversies to see how source use patterns varied. Similar to recent findings in an analysis of newspaper coverage of pesticide use in California, the results here suggest that activists were used as sources more than industry representatives were,

and that pro-environment positions were presented more than anti-environment positions were. Subjects were randomly assigned in a posttest only experiment. The test group was exposed to four newspaper accounts of evidence contamination involving police. Three hypotheses postulated that exposure to such articles would result in a more negative view of justice administration, when compared to the control group. All hypotheses were confirmed. Results supported a relative symmetrical hostile media effect whereas Republicans tended to be more likely to perceive a liberal bias, Democrats tended to be more likely to perceive a conservative bias, with Independents lying in between. Media exposure and media involvement appeared to have no significant effect. Hierarchical regression analyses of an online survey of Dutch adolescents showed that exposure to content of varying explicitness adds up in its relationship with beliefs that women are sexual objects. Exposure to sexually explicit content eventually dominates over exposure to sexually non-explicit and sexually semi-explicit content. The current study included programming from May for a total of hours across different programs. Talking to Young Voters. Mainstream media, television as well as print, are not sufficient sources of campaign information for young voters, who tend to rely more on online and alternative media formats. Findings suggest specific ideal self-concepts and television viewing patterns have differential effects on brand consciousness. Implications for the perpetuation of a brand consciousness society are discussed. A qualitative thematic analysis of student reflection papers found weariness with the reports of the attacks, lack of new information, and obligations of being a student were among the reasons given for the shift. Who Do You Know? Student respondents were asked to identify 60 news figures whose head shots were taken from the three top-circulation news weeklies. Half the news figures were political; the other half were entertainment figures. Results were examined by gender, media use and political interest level. Also reported are misidentifications of the 60 news figures. Critics argue that it is difficult to gauge whether these state versions of C-SPAN have any value since no one really knows. This study is an attempt to begin to answer that criticism.

### Chapter 2 : Delaware Way: Governor Carney: SportsPick, Full-Scale Sports Gaming Starts On Tuesday

*Casinos Organization and Culture by Chris Roberts. Casinos describes the organizational structural of casino facilities with information on different casino departments and their functions and the culture within the casino hotel.*

Never Have I Ever is a drama dealing with addictive behavior around food and body image written by playwright Jan Rosenberg after she interviewed students at BSC and other schools on the subject. Alan Litsey and Matthew Mielke, engaged in three days of discussion and readings of the play in New York City last summer with the playwright, professional actors, and students from West Chester University. The move allows Birmingham-Southern students a direct path to a graduate degree in nursing while exploring their other passions; they can major in a variety of subjects and experience learning hands-on through internships, travel, and service-learning, said BSC President Linda Flaherty-Goldsmith. BSC seniors may begin the program once they have completed at least 29 units of their undergraduate coursework. According to Nurse Journal, MSN holders usually have better job opportunities, receive higher pay, and are more likely to take on management roles, earn a Ph. Ireland Endowed Chair in Nursing Dr. Some nursing experts say that a liberal arts background is increasingly important as health care providers face more complex challenges, expanding technology, more diverse clientele, and a need for critical thinking. Birmingham-Southern is a good example. A tuition reset was on her list of initial strategies to pursue, she said. The college started work on the idea at the beginning of August, studying it for about a year before announcing its reset Sept. It also found that the South was different from other parts of the country in that more than three-quarters of students preferred public universities to private colleges if the two options cost the same amount. Newton, currently the president of infrastructure and operations at Uniti—a leading provider of infrastructure solutions—spoke on his entrepreneurial journey. BSC reaches out to Houston A team of students and staff from Birmingham-Southern traveled to Houston during spring break to work with flood victims. The Category 4 storm hit Texas on Aug. The BSC team stayed at the church and met with some of the 75 Birmingham-Southern alumni who live in the Houston area and explored the city. Alternative Spring Break, in which students spend their week on service projects, has long been a tradition at BSC. Jason Heaton, associate professor of biology, is part of a team of researchers that unveiled the most complete Australopithecus fossil ever found. Heaton, who started on the project while conducting his Ph. Shane Pitts, Jack G. His research was conducted in collaboration with Dr. Only 32 papers were chosen for the session from 2, entries. Hayden, who has been at BSC since, teaches biochemistry and medical chemistry, a course in which students complete a significant service-learning component each term. Her research is centered on the structural and thermodynamic understanding of non-helical DNA structures and their biological functions in the cell. Ream Shoreibah, visiting assistant professor of marketing, is one of three authors of a paper in the journal Industrial Marketing Management. Jason Heaton works to explain why having gender diversity improves team performance, and how adding women to all-male sales teams reduces turnover and enhances relational skills. Four biology faculty members—Assistant Professor Dr. Kevin Drace, Assistant Professor Dr. Katie Gibbs, Associate Professor Dr. Professor of Music Dr. Jacqueline Leary-Warsaw was the producer and on-air television host of two concerts that aired on the EWTN cable network: She also served as emcee at a post-concert gala honoring the choir. The children, most between the ages of 8 and 10, were dancing and singing their way through a year-long tour of the U. The young performers are representatives of a Christian child sponsorship ministry called Childcare Worldwide, which is focused on education and development across the African continent. This intensive, structured program links students of all majors and interests—who are selected through a competitive process—with mentors in their field to help them achieve their educational and career goals. Another focus will be on educating schoolchildren on their local geography, an important factor in weather and emergency awareness, Hazelhoff said. In future phases, additions include extensive landscaping, an indoor-outdoor event venue, and an interactive classroom space built around virtual reality. The SEC plans to draw on the work of

BSC students—especially those majoring in media and film studies, urban environmental studies, education, and creative and applied computing—to enrich the program. To learn more about visiting the GeoDome or to support its continued development, visit [www.birmingham-southern.edu](http://www.birmingham-southern.edu). He enrolled at Birmingham-Southern in as a business major just two years after James Hood and Vivian Malone became the first students to integrate the University of Alabama. He was one of the foot soldiers of the civil rights movement in Birmingham. Pierce is an investor, board member, and has held multiple executive positions at Isagenix, a fast-growing health and wellness company headquartered in Gilbert, Ariz. The couple split time between their homes in Miramar Beach, Fla. Pierce Hall dedication Recycling returns In the fall semester, BSC added 30 outdoor recycling containers around the central campus and residence hall quad. The Student Government Association provided generous financial support to make that possible. A priority was to implement a more robust single-stream recycling program that would allow BSC to combine paper, plastic, aluminum, steel, and cardboard in one container, said W. The new blue bins were placed across campus near the end of the fall semester. Share your news Send us information about your honors, awards, volunteer work, and other activities of interest. We also welcome your photographs. Submit photos to [communications@bsc.edu](mailto:communications@bsc.edu). Bringing data to D. When the District of Columbia started to equip police with body cameras, administrators could have prioritized areas with higher crime, or those with a history of difficult interactions between police and civilians. From another angle, the Lab works to compile data from disparate administrative departments—overlapping information and then mining it for insights. To prevent the spread of rats in the city, he said, his office looks at information from trash collection, water leaks, and restaurant health reports to see where they need to be before a problem gets big. Yokum, a native of Monroe, La. Now, he says, he has used the same principles to experiment with margins on tax forms to see what makes people more likely to sign, among other things. But he fondly recalls his faculty and courses from BSC, calling out three favorite biology professors among many others: Wayne Shew, and Dr. He does so for the same reason he prefers hiring people with liberal arts degrees like his own. She also worked in a chemical engineering lab at Louisiana State University to create a procedure to photo-deposit gold nanoparticles onto zinc oxide nanowires for water purification. All that hard work paid off. Crawford was chosen by a selection committee from national candidates based on her exemplary record of leadership and service. At BSC, Crawford is studying biology with a long-term career goal to conduct scientific research. BSC accumulates accolades Birmingham-Southern continued to notch awards and congratulations this year: BSC also ranked No. The chapter inducted 58 new students this fall. Students must have a cumulative grade point average of 3. Professor of English Dr. The space also boasts an eclectic mix of items reflecting her interests in art and literature: That office has inspired not just her own writing, but also those of generations of BSC students. Sprayberry celebrated her 30th anniversary on the Hilltop this spring; she has held her endowed professorship since She said she knew at the start that BSC would be a good fit. She has also led several January trips to South Africa, and has met South African Anglican cleric and human rights activist Desmond Tutu three times—something she calls one of the highlights of her life. Compiling a program-best overall record and a record in the Southern Athletic Association, the Panthers advanced to the semifinal round of the conference tournament and, along the way, earned many individual honors and awards. She was second in the conference in goals, points, shots, and shots on goal, and she led the SAA in game-winning goals with five. She was also second on the team in shots and points and scored three game-winning goals during the season. Nine qualified for national championships. John Dowd of Dothan, Ala. I felt the need to give back. For the Dowd family, the successful coexistence of a high-quality education and athletic competition is right in line with their priorities. The team helped the entire drive collect , diapers, 10, over its original goal. Fall sports finished with a. Head Coach Tony Joe White has the football program on an upward swing, and our Panthers are already reaping the rewards. BSC accounted for 13 all-conference football honors in —the most since On top of four all-conference nods, volleyball had two all-region selections, and sophomore Julia Denby was named an American Volleyball Coaches Association All-American. Our student-athletes continue to serve the community through organizations such as Make-A-Wish, the ALS Society, Wounded Warriors, local

elementary school mentorship programs, and more. Keep an eye on the Hilltop. Big things are on the horizon. While the college had originally begun football in , the program was disbanded in . More than Panthersâ€™reflecting 22 sports teamsâ€™combined for over a 3. Since , she has amassed nearly wins and coached more than 1, matches. Founded in , the hall of fame honors former student-athletes, coaches, administrators, and teams for their contributions to BSC athletics. The award is named for the late BSC alumnus and hall of fame founder. Senior Jamal Watkins successfully defended his 60m championship and fellow senior Karmin Shute ran to two AllAmerica honors in the 60m and m dashes. Watkins now has three national titlesâ€™two indoor and one outdoor. He concluded his indoor career as the BSC record holder in the 55m, 60m, and m dashes. Shute finished second in the m dash in a new BSC record time and earned third in the 60m with a personal best.
