Autodesk Revit offers the following installation improvements: Multi-lingual user interface MUI. After installing the software on a target computer, you can install additional language packs. With language packs, the user can choose from among the installed languages when starting the software. Relevant content packs based on region and language and localized offline help are included with language packs. In previous releases, the installation seemed to stall while it downloaded content. With the new release, a Content Pack Status progress meter provides visual confirmation that the installation is still active. Stand-alone installation for Revit Server. On target computers for Revit Server Hosts and Accelerators, you can now use a stand-alone installer that requires less disk space. You do not need to use the full Revit installation program on those systems. Revit LT does not support Revit Server. Based on your WikiHelp comments and suggestions, the Revit User Assistance team has improved the online Help to better explain Revit-specific information regarding installation and deployment. Please continue to provide us with feedback. Autodesk now has a hotfix delivery method that uses a true installation. Installation improvements for Autodesk software are described here: Licensing Licensing improvements for Autodesk software are described here: Deployments Revit LT does not support deployments. When creating a deployment, you can now specify language packs to install as part of the deployment. Use the Include Additional Software option when configuring the deployment. The name of the default folder for deployments has changed from AdminImage to Img. This change helps to reduce the impact of the character limit for deployment paths. If you used inifile. You no longer need to place copies of the file in multiple locations. After creating a deployment, place your version of inifile. Deployment improvements for Autodesk software are described here:

Access online from any Internet-connected device with browser. License code restrictions prevent multi-user access or use on networks. Instructor Tools are sold separately from the Student Guide and eBook. The Instructor Tools for this training guide are delivered in a downloadable PDF document and contain answers to questions throughout the guide and timing suggestions for delivering various sections of the course. Please refer to the link in your training guide to download the latest class files. The training guide will also familiarize students with the tools necessary to create, document, and print the parametric model. The examples and practices are designed to take the students through the basics of a full MEP project from linking in an architectural model to construction documents. Working with linked architectural files. Creating spaces and zones so that you can analyze heating and cooling loads. Creating HVAC networks with air terminals, mechanical equipment, ducts, and pipes. Creating plumbing networks with plumbing fixtures and pipes. Creating electrical circuits with electrical equipment, devices, and lighting fixtures and adding cable trays and conduits. Creating HVAC and plumbing systems with automatic duct and piping layouts. Testing duct, piping and electrical systems. Creating and annotating construction documents. Adding tags and creating schedules. Detailing in the Autodesk Revit software. It is highly recommended that students have experience and knowledge in MEP engineering and its terminology.
