Steve Nison is known worldwide as the father of modern candlestick charting. He not only introduced this exciting and powerful charting method to Western traders, but he continues training thousands of traders and investors every year.

History[edit] Candlestick charts are thought to have been developed in the 18th century by Munehisa Homma , a Japanese rice trader of financial instruments. They are often used today in stock analysis along with other analytical tools such as Fibonacci analysis Fibonacci retracement. As will be seen later, when I discuss the evolution of the candle charts, it was more likely that candle charts were developed in the early part of the Meiji period in Japan in the late s. The area between the open and the close is called the real body, price excursions above and below the real body are shadows. The wick illustrates the highest and lowest traded prices of a security during the time interval represented. The body illustrates the opening and closing trades. If the security closed higher than it opened, the body is hollow or unfilled, with the opening price at the bottom of the body and the closing price at the top. If the security closed lower than it opened, the body is solid or filled, with the opening price at the top and the closing price at the bottom. A candlestick need not have either a body or a wick. To better highlight price movements, modern candlestick charts especially those displayed digitally often replace the black or white of the candlestick body with colors such as red for a lower closing and blue or green for a higher closing. Complex patterns can be colored or highlighted for better visualization. Rather than using the open-high-low-close for a given time period for example, 5 minute, 1 hour, 1 day, 1 month, 1 year , candlesticks can also be constructed using the open-high-low-close of a specified volume range for example, 1,; ; 1 million shares per candlestick. Generally, the longer the body of the candle, the more intense the trading. A hollow body signifies that the stock closed higher than its opening value. A filled body signifies the opposite. Usage[edit] Candlestick charts are a visual aid for decision making in stock , foreign exchange , commodity , and option trading. For example, when the bar is white and high relative to other time periods, it means buyers are very bullish. The opposite is true for a black bar. Candlestick charts serve as a cornerstone of technical analysis. The main usage of a candlestick patterns is to identify trends. Unlike with regular candlesticks, a long wick shows more strength, whereas the same period on a standard chart might show a long body with little or no wick. Depending on the software or user preference, Heikin-Ashi may be used to chart the price instead of line, bar, or candlestick , as an indicator overlaid on a regular chart, or as an indicator plotted on a separate window.
