In frost free regions, they may bloom all year long. The Asparagus Fern is a very popular plant for florists who commonly use the lacy fronds in arrangements. These decorative vines will grow up to 10 feet with support, or they can be kept to a more compact size by regularly removing the tips from new growth. It is tolerant of a wide range of conditions, and rewards you with a long lasting cover of delicate flowers in early Spring. In the fall months, Autumn Ferns once again change colors. They should be planted in evenly moist, compost rich soil and grown where they will receive partial to full shade. From late spring until mid summer, they produce impressive, foot tall spikes of hooded, white or light pink flowers. Their leaves vary considerably in texture, size, shape, patterns and colors. The inconspicuous, small, pink or white flowers may appear at any time of the year. Lewisia cotyledon " Bitter Root plants produce clusters of 1" flowers on 10" stems in shades of white to pink or gold, occasionally with red and white stripes from spring to early summer. Easily hybridized Rock Garden plant. Lewisias can be grown as house plants. These native prairie flowers can be found growing wild in almost every state. These bright, daisy like flowers are excellent to use in cut flower arrangements. Deadheading spent flowers will prolong the blooming period considerably. The Black-Eyed Susan Vine is an evergreen, twining vine, most often grown as a long blooming annual. Black-Eyed Susan Vines have dark green, arrowhead-shaped, 3" leaves. New foliage emerges dark green in spring then changes to dark purplish-black by summer. Loose spikes of small, light pink or white, bell shaped flowers appear in mid summer. Bleeding Heart is a mound forming plant with finely cut, fern-like foliage on graceful foot arching stems topped with pretty, heart shaped, 1" flowers in late spring or early summer. Excellent plants for any shade garden or woodland setting

Do something different every year. Some have foliage year around. The next thing to be concerned about is sun or shade, or partial sun. Where are you planting? Will you have a softer morning sun, or a hot afternoon sun. Drought tolerant perennials withstand afternoon sun quite well. Another possibility is a container plant. Many nursery plants can be kept in containers and placed on a deck or porch. Simply bring the container indoors, but check for insects first. The life of some annuals can be extended by keeping them in containers and bringing them inside for the winter. Twin Bridge Nursery has many options to choose from that work well in upstate South Carolina. Some of the more popular items include ground cover plants, ornamental grasses, and ferns. Ornamental Grasses We carry a wide variety of ornamental grasses, which are perennials. Dwarf and shorter varieties are a very popular choice as a border. You see them used at the edge of a garden or flower bed and around ponds or in rock gardens. Planting along a driveway is also popular. Taller grasses can be used to compliment and accent shrubs that you place in a defined bed. The largest ornamental grasses can be used as a center piece in a small bed. This is a popular use for pampas grass in our area. Ornamental grasses we generally have stock: Hamelin or Hameln Dwarf.
