the earth care manual 9 out of 10 acorns! Patrick whitefield is one of the most important european permaculture teachers/authors. His extensive writing has taken us from Reading the landscape, too Permaculture in a nutshell, the first a very specific work on british landscapes, the second an introductory work on permaculture.

La Palma Canary island Zone 11 37 posted 3 years ago 8 acorns! Well, you already know that this is a good book, so what else? Each chapter is a book in itself. It is a big book and I would dream of very focussed little books , so that I can get just what I want and need So, if you have no pond , you will get the information anyway! If your garden is not big enough for trees , or for animals, will get it. And some energy stuff like solar or wood heating. You might want to have more or nothing about some topics. Rural and urban locations are both considered, like for example when he talks about shade. But yes, when you want to understand globally, this is a great book: Another good way to understand is when you are not told that it is "bad to till the soil", but the reasons to do it or to not do it. I like global understanding like cycles, causes and consequences, combined effects So you will learn more about how to think further than what is in the book. Instead of a list of what plant need what quantity of sun, you will learn what type of plants need what. Large leaves are made for making the best of light under shade, logical. It will teach you to develop more logic and ask you the right questions. Some details to explain what I like: The explanation is progressive, with drawings, and when you read the conclusion in 2 lines, you are sure to remember it, and the knowledge behind it will stay in your mind. About polination, you will learn that wind is important to polinate, this you know, but also for plants that depend on insects, because bees do not like wind. This book is full of precious details to become more pationate about scientific knowledge. This book is great to make you learn how to use this knowledge and apply it, or at least to look for ways to apply it, yourself. I also love the omnivorous or vegan? I absolutely share his point of view, and, with respect of the ethic part of the choice, he explains well why he is not on the vegan side. It was also the 1st time I read that the option of "just dairies and eggs" is less logic than the vegan approach. He also points out the importance of the quality of life of the animals, and that this is more important that the fact the animal is going to die. And he gives solutions so that each one can try to solve the ethic problem in the best adequate way, according to different parameters. Global understanding, techniques, matter for you to think more about details associated to the context, makes it readable from start to end, or pick what you need when you need. Well, Patrick is a great "dad": Ho, and wanted to say that even in my sub-tropical climate, this book is great, and anyway, understanding how your climate influences your choices is a key to adaptation. No year will be the same, and our predecesors were more used than us to plant for different possibilities in their place. If one thing fails, some other will succede, and it might not be the same each year And the book will tell you a lot about climate too. Might be 9 acorns instead of Dry subtropical Mediterranean - My project However loud I tell it, this is never a truth, only my experience
