

Chapter 1 : Man on a savings mission: NS&I chief Ian Ackerley interview | Civil Service World

Tom Ackerly, the British Assistant Film Director, and Producer, was born in the new year of month in Surrey in the United Kingdom. He is the son of the estate agent of Surrey. He completed his studies at Godalming College, London.

What if Severus was the one who bought the Firebolt, not Sirius? Note from SeparatriX, the archivist: To preserve the archive, I began manually importing its works to the AO3 as an Open Doors-approved project in August. I e-mailed all creators about the move and posted announcements, but may not have reached everyone. If you are or know this creator, please contact me using the e-mail address on HP Fandom collection profile. The story is based on characters created and owned by J. Rowling, various publishers including, but not limited to Scholastic Books and Warner Bros. No copyright or trademark infringement is intended; no monetary gain will be made from this story. Carol Harry did not lose his Nimbus to the Whomping Willow tree in this third year; he is still using his trusty broom at the start of this story. The night was clear and crisp; he could see a few stars, but the ambient light of Little Winnig obscured most of them. He heard the sound of laughter from the kitchen below. Harry looked toward his locked bedroom door. It was very strange that the Dursleys were still awake; they were creatures of habit and were usually asleep by. He knew it was doubtful that he had been born exactly at midnight on July 31st, but he had always marked that time as the moment of his birth. Looking back into the night sky, he saw an odd shape in the sky approaching Privet Drive. He had seen that odd shape several years earlier and stepped back from his window. A tiny ball of feathers flew into his window moments before the larger mass flumped onto his bed. Pigwidgeon hooted softly and landed on the bed, gently nudging the unconscious owl. A soft hoot of thanks told him the old owl was still alive. After being relieved of his package, the Hogwarts owl hooted once and took off through the window, not stopping for water or a treat. Hedwig nipped at his hair as he removed her burden. The locks on his door were drawn and Harry saw the large silhouette of his uncle filling the doorway. He squinted at the bright light from the hallway. Harry shook off the shock and began to look around his bedroom. Opening his wardrobe, he grasped the handles of his school trunk and hauled it to the center of the room. His mind in controlled panic, he began to stack his schoolbooks into the trunk, followed by his cauldron. He added that to the neatly stacked clothing and parchments. Without looking at them, his birthday presents, cards and letters were added. A nervous glance at the alarm clock showed he still had twenty minutes. Kneeling beside his bed, he opened his secret compartment in the floor. Tucking his wand into his waistband and a pouch of wizard currency in his jeans pocket, he added his photo albums into the trunk. His invisibility cloak was set aside. Adding a bag of owl treats and the now empty water dishes to the trunk, Harry performed a simple enlargement charm on the cage and secured the three owls inside. Due to the rise of Voldemort, the Ministry had rewritten its underage wizardry laws to permit sixteen-year-old wizards living in the Muggle world to perform magic while on school holidays. Harry checked his wardrobe, desk and dresser for forgotten items. He removed several posters and drawings from his walls. He added the quill and rune stone he found under his bed. With a final look around the bedroom, he added the alarm clock and locked his trunk. With seven minutes to spare, Harry pulled on a Weasley sweater over his t-shirt and jeans, and pulled a bicycle cap onto his head to hide his scar. He placed a featherlight charm on the owl cage and reduced the trunk to fit in his pocket. He tied the invisibility cloak into a loose knot around his waist and pulled his baggy sweater over it. Grasping his Nimbus racing broom in one hand and the owl cage in his other, he silently descended the stairs. Uncle Vernon, Aunt Petunia and Dudley were waiting in the foyer. Uncle Vernon opened the front door, reached into his trouser pocket and threw a wad of crumpled pound notes and change out the door. Harry paused, opened the door to the cupboard beneath the stairs and crawled in, returning with an old cigar box containing his toy horse figures and soldiers, and a ragged baby blanket. Dudley took a step back in alarm as Harry drew his wand and reduced the box, adding it to his pockets. The blanket was draped over the owl cage to make them feel secure. He swallowed to keep his stomach from heaving. Stopping in the small park on Magnolia Crescent, Harry held his wand into the air and summoned the Knight Bus. After a moment, he heard the distinctive boom, a flash of light, and the purple triple-decker bus careened to a stop beside him. Thankfully, Stan and Ernie were not

driving that evening, so Harry was able to travel in total anonymity. Harry paid his fare and passed by several occupied beds. He set the owl cage and broom on the foot of the bed and curled up into the top two thirds, deep in thought. How anyone could fall asleep on this bus he never knew. After watching the witch beside him spill hot chocolate onto her pillow for the second time he was glad he had declined the beverage. Stealthily, he untied the invisibility cloak from around his waist and gathered the silky fabric in his hand. A number of witches and wizards disembarked at The Leaky Cauldron. In the distractions that followed the loading and unloading of passengers, Harry slipped beneath the cloak and slid into the busy pub. Careful to avoid contact, the slim wizard ducked behind the bar and waited for Tom to have a calm moment. Without asking questions, Tom hurried the still invisible wizard into a room behind the bar. In the battle of Light and Dark, Tom was a neutral player with friends on both sides, but Tom was first and foremost a great-great grandfather and he would have defended any child with his life. Tom waved for one of his employees to take over the bar for a few minutes. The old wizard moved Harry and the owls to a secret safe room. Harry awoke a little after 5: The other staff members, with the exception of the house elves, were on holiday and even Headmaster Albus Dumbledore was visiting his brother Alberforth in Denmark. With no place to hide and under pointed questioning by both professors, Harry was forced to admit to the fifteen years of abuse he had suffered at the hands of the Dursleys. Harry decided that it was a good thing Professor Dumbledore was away because Professor McGonagall with her claws out was even more frightening than Professor Snape in a full snit. He would help Mr. Harry did not leave the school grounds for the remainder of the summer. Harry had been helping him the past few days repackaging some of the bulk supplies and restocking the cabinets and storerooms. Severus was forced to reevaluate his long held animosity toward the younger wizard. The young man continued to surprise him. Harry had not panicked when he found himself abandoned by that idiot Muggle uncle with barely enough Muggle currency to purchase a plate of fish and chips from a corner pub, he had agreed with and not complained when Minerva informed him it would be unsafe to leave the school grounds or to visit with friends and he had performed his tasks diligently, without complaint. He had even managed to do the impossible; Harry Potter had made peace with Mrs. What remained was a fierce, introspective young man who Severus realized was looking and acting less like James Potter and more like Lily Evans. Soon, they began discussing other things. Gone was the Muggle-raised boy who had never heard of asphodel and wormwood; Harry had attacked his fifth year with a fervor that nearly put Hermione Granger to shame and he had dropped any course that would serve no purpose in the fight against Voldemort. As the other professors began to arrive, Harry helped them get their classrooms in order. Flitwick, Trelawny and Vector only needed him for several hours. He spent several days helping Hagrid and Flich with the Owlery and several more days with Madam Pomfrey in the Infirmary. Severus continued to study Harry. Once he began to see the green eyed young man without his own filter of paternal hatred, he realized that not many people actually saw Harry. The Dursleys saw a freak that needed to be controlled through abuse; the wizarding world saw a one dimensional cartoon savior. But very few people saw the real Harry, an emotionally damaged, affection starved sixteen year old. Several days before the start of term, Severus awoke early and decided to take a walk before breakfast. A flash of color over the Quidditch Pitch caught his attention. Harry was practicing; the preciseness of his maneuvers left Severus transfixed. Over the years, the Seeker had honed his skills; his Wronski Feints were some of the best Severus had ever seen, including those by the professional players. As the Potion Master watched Harry turn tightly through the goal hoop, he wondered how much better the wizard would perform with a top of the line racing broom. His five-year-old Nimbus was a dinosaur among racing brooms. He was glad that they seemed to have arrived at some sort of truce, almost a friendship. He had examined his feelings toward the Potion Master after the Tri-Wizard Tournament and realized that Severus wore even more masks than he did. He also realized that the man never really hated him. The Wizard Debt owed James Potter had been paid in full by his first year, but Severus continued to protect him and the confrontational attitude was merely an attempt to keep him grounded. He had almost convinced Professor McGonagall to let him ride the train, but in the end, she decided it was better to err on the side of caution. Ron and Hermione sat on either side of him, happy to be back at school. They both chatted excitedly about their summers. Hermione and her parents had traveled throughout Eastern Europe and the Weasleys had visited

Charlie in Romania. Did you spend lots of time in the library researching your homework?

Chapter 2 : | Dr. Ritchie Shoemaker

The passion contained in We Think the World of You is equaled only by its devastating self-awareness. The reader begins to detect early in this brief tale (Ackerley referred to it as an "Adult Fairy Tale") the delusions of the narrator: his idealization of Johnny, his transparent self-projection onto Evie, his odious class-consciousness and.

H, ABIHM, is a classically trained psychiatrist and board certified integrative physician who understands both the biochemistry of the brain and the need for a healthy balance of neurotransmitters, hormones and the immune system. She embraces the latest advances in natural healing and integrative medicine to enhance conventional methods of treatment. While studying shamans for her Harvard thesis, Dr. Thus, early on, she recognized the need to bridge what is known in medicine with what is unknown using science to show the way. Later, she journeyed to Lhasa, delving into Tibetan healing and the relationship between body, mind and spirit. Mary is particularly interested in symptoms of anxiety, fatigue and depression that fail to respond to conventional treatment. She seeks to address the root cause of these conditions through an evaluation of genetic mutations, hormonal imbalances, chronic inflammation, and hidden infections such as mold illness, Lyme disease or viral infections. Mary remains open and curious to all possibilities in the realm of health, and continually looks for answers to chronic illness that may fail to surface in the mainstream. She is particularly interested in elucidating the links among the brain, the immune stem and hormones. Mary understands the debilitating consequences of ongoing depression, fatigue and anxiety. Her goal is to remediate the underlying effects of neurotransmitter, hormone and immune depletion in a way that brings about lasting health and freedom from pain. Almost everyone with depression or anxiety has some alteration in the function of their endocrine or immune system. She feels a putative diagnosis of a psychiatric disorder is not complete without an evaluation of the neuroendocrine and immune axis. Measurement of various viral antibody levels, in addition to different cytokine, immune and toxin biomarkers will assist Dr. Ackerley in her evaluation of your immune function. Consideration is also given to nutrient imbalances, because micronutrient deficiencies are often present in many disorders. Gastrointestinal function is targeted because the microbiomal population directly affects neurotransmitter production. Often this type of testing is covered by insurance. Through evaluation of your immune, endocrine, and GI systems, Dr. Mary seeks to optimize your health using medical data, not guess work. She will determine what steps can be taken to create wellness for you and designs an individual treatment program which includes the proper staging of different therapeutic protocols. This may include the use of traditional Western medicines, when appropriate, as well as various herbs and supplements such as amino acids, probiotics, trace minerals, fatty acids and natural vitamins. Additionally, simple methods of detoxification for the liver and GI tract, and as well as dietary changes to support the development of optimum health will be recommended. If biotoxin illness, including mold, is diagnosed she will follow the Shoemaker Protocol for treatment. Mary appreciates a patient that is consciously engaged in their own recovery and who has a responsible attitude toward their own healing journey. She looks forward to working with you in your journey to true health. She is also nationally board certified in Integrative and Holistic Medicine as well as an active member of the Arizona Homeopathic and Integrative Medical Association. She is also a graduate of the three year program at the American Medical College of Homeopathy.

Chapter 3 : The Alliance for Green Heat - Board of Directors - Sustainable, Local and Affordable Heating

Hope Ackerly LMT, Poughkeepsie, New York. likes 5 talking about this 8 were here. I am a licensed Massage Therapist who provides deep tissue/.

Board of Directors John Ackerly John Ackerly is the Founder and President of Alliance for Green Heat, a non-profit that promotes cleaner and more efficient residential wood and pellet heating, with a strong focus on low and middle-income families. He is an avid rock climber, outdoorsman and wood stove aficionado. Forest Service in after 38 years. As a sustainabilist, his passion is to bring together the social, environmental and economic elements needed to create a sustainable society. He got a B. He had various positions working for National Forests in Oregon and Montana accomplishing reforestation, forest improvement, writing silvicultural prescriptions and timber sale planning and implementation. He also had experiences with Wild and Scenic River assessments, Off-Highway-Vehicle management for multiple states and invasive species management. In mid-career he got a M. He managed the Forest Health Monitoring Program for a 5 state area. He developed and managed the Fuels for Schools Initiative starting in , which used waste trees and parts of trees to produce wood energy; initially at schools and then at a wide variety of facilities including hospitals, colleges, ski resorts, prisons, etc. Wood Innovations includes efforts to expand the use of mass timber products in commercial mid and high-rise buildings. The mass timber products store carbon, while also reducing the fossil energy and carbon needed to build these structures. In retirement he is continuing to pursue his passion of creating a more sustainable society. Before that, she was Manager of environment and climate change, where she managed research and due diligence for the Calvert Social Index, the global alternative energy and water funds, and a green bond investment strategy. She has testified and briefed a range of policymakers on financing cleantech, alternative energy and climate change. Jonathan Kays Jonathan has an M. Degree in Forestry from Virginia Tech, and a B. Forest Service in northern Idaho. He works on forest stewardship, woodland owner volunteer training, wildlife damage management for deer and voles, alternative income opportunities utilizing natural resources, and the use of biosolids to grow forest trees on gravel spoils. In April he organized the Maryland Wood Energy Coalition with the Maryland DNR Forest Service to bring together representative from state agencies, industry, nonprofits and others, to determine how to increase the wood energy in Maryland. Jonathan has authored numerous extension publications and books, produces a quarterly newsletter Branching Out for Maryland forest owners, and other materials that can be found on his website. Ben Larson Ben Larson works on biomass at the National Wildlife Federation, promoting biomass policy and development that is compatible with wildlife and reduces atmospheric carbon. Ben also works on grasslands conservation. In addition to advancing state and federal renewable energy and climate legislation, he developed consensus with forest owners, foresters, conservationists and biomass generators on sensible, cost-effective sustainability standards for biomass policy. Ben is a native of North Dakota and Minnesota, and for ten years farmed five acres of organic produce, for farmers markets, CSAs, restaurants and grocery stores. Nick Salafsky Nick Salafsky is Co-Director of Foundations of Success , a non-profit organization that seeks to improve the practice of conservation. FOS works with conservation practitioners around the world to define clear and practical measures of conservation success, determine sound guiding principles for using conservation strategies, and develop the knowledge and skills of individuals and organizations to do good adaptive management. Nick also spent several years in West Kalimantan, Indonesia, conducting interdisciplinary research on the forest gardens, a locally developed agroforestry system, and the behavioral ecology of the red-leaf monkey. Nick has a Ph. He has been building masonry heaters since , and joined early efforts to write codes and standards. As the need to measure masonry heater performance and emissions became evident, he worked through MHA to develop in-house testing expertise and build a database on PM emissions performance. He hopes that the recent development of simpler testing technology will accelerate the search for the cleanest ways to burn wood on a domestic scale. He likes the fact that masonry heaters can be built with local skilled labor, are a proven low emissions technology with a long history, and yet recent research in Austria has resulted in a very substantial further drop in emissions.

Chapter 4 : McClure's Magazine/Volume 14 - Wikisource, the free online library

22 Years ago, magician Phil Ackerly was laid off from his day job at Fujitsu Microelectronics with a wife, a ten month old son, and a brand new home that was just coming out of escrow. This ultimately resulted in him taking his passion of performing magic full-time, making it his career.
