

Chapter 1 : THE JOYS OF SOARING | Logical Insight

*The Joy of Soaring [Carle Conway] on calendrierdelascience.com *FREE* shipping on qualifying offers. This book is the latest in a long series of publications by the Soaring Society of America designed to promote not only enjoyment.*

When WHO is identified with what, seriousness and suffering arise. When WHO is identified with nothing, humor and freedom arise as so much loose "change. The joy and happiness of living are here and now in the present moment. The NOW Moment is the only time when you are truly alive. The past is dead. The future is not yet born. Only the NOW Moment is clear. The past is always clouded by judgment and ego. The future is hidden in the mist of maybes. Every moment spent in the past or the future is another NOW Moment missed. I know some people who spend most of their life energy reliving the hurts, insults, and unhappiness of their past. Do you know someone like that? I also know others who spend most of their time living in their future, sacrificing all of their NOW Moments. In neither case are they choosing to live fully. Do you recognize the patterns? Joy and happiness are only found in the NOW Moment. The future is hidden in the mist of free will and fantasy. The NOW Moment is perfectly clear. Only in the NOW Moment are you truly alive. You cannot dance in what was. You cannot sing in what will be. The past is always ending. The future is always beginning. The joy and happiness of soaring are goals you can reach easily and comfortably--it only depends on the way you look at life and on your capacity to love yourself and others. This life is a very special opportunity for you. Each of your experiences is a precious gift, a treasure of great value. This is especially true of your problems Yet the butterfly knows there is a magic and mystery in the transformation. Instead of munching on leaves and crawling about, the butterfly flits about, drinks the nectar of the flowers, and sports a beauty unimagined by the caterpillar.

Chapter 2 : Joy of Soaring: A Training Manual by Carle Conway

out of 5 stars shipping and receipt of Joy of Soaring The tracking number provided by Amazon was missing two numbers so I was unable to track the package. The book was represented to be in very good condition and it was.

August 20, Author: Barrie Taylor I was fortunate to have discovered the joy of soaring at an early age having gone solo in a glider as teenager. It was a case of love at first flight. Since then I have accumulated over hours in over 40 years, 17 years as an instructor. Although I have flown many hours of power, gliding must be without doubt the most challenging and rewarding of aviation sports while debatably requiring the most precision and skill. Imagine for a moment climbing into the sleek and modern hull of a high performance, carbon fibre glider, reclining back in the cockpit before being towed to feet by a tug plane, then releasing the tow rope. Now, free as a bird and using nothing but thermal energy provided by nature, you swiftly climb to 20, feet AGL in lift registering 7mps on your variometer. Exceptional conditions maybe, but often experienced in South Africa. You are now obviously on oxygen. Then picture setting off, on a km cross country with no engine at a cruise speed of kph and an outside air temperature well below freezing. Suddenly to your right you observe a massive eagle in formation with you, no oxygen mask, and no canopy to protect him from the cold, no warm flying suit, and not even flapping his wings to keep up with you in this freezing air. How does he achieve this and why is he there? I can only say I am one of a privileged few to have experienced this phenomenon. I have soared with eagles, vultures and other birds of prey and these are just some of the experiences I will never forget. Modern gliders have evolved to a performance level that was science fiction when I started flying. You can even have various self launching options now. Such sailplanes are normally fitted with a generous array of the most modern avionics. At the end of the day it really depends on your pocket. However, if you want one of the best I guess you have got to be prepared to pay the price. When the wheels are up and the propeller is folded away in the nose compartment, this machine is transformed in seconds into an aerodynamic glider with an aspect ratio as high as Even 15m gliders without power have been known to cover km during daylight and some have achieved speeds of kph. The world altitude record is over 50, feet, obviously with the pilot being in a pressure suit. Not bad for something that is totally reliant on natural energy. While some of the best South African gliding conditions are often found over central Free State possibly one of the most dramatic venues has got to be the Drakensburg with its breath taking scenery. Also the lift off the mountains can take you to over 30, feet. We arrived at Champagne Castle by 1. Science fiction, unbelievable, well believe it. You have picked out a suitable landing site as the inevitable approaches. Then suddenly you find a 3mps thermal, bank sharply to centre on the lift and rapidly climb back to feet. Using this height you are able to make it home completing the task. What could be a more exciting and challenging form of flying than this? I rest my case.

Chapter 3 : So long, Soaring - Soaring Cafe

The Joy of Soaring - A Training Manual, is the latest (as of) in a long series of publications by the Soaring Society of America designed to promote not only enjoyment, but proficiency and safety in soaring activities.
