He is said to have been born in the smithy, his father having been the village blacksmith. He was sent at the age of sixteen to Cambridge University: Ray was chosen minor fellow [a] of Trinity in , and later major fellow. Among these sermons were his discourses on The wisdom of God manifested in the works of the creation, [5] and Deluge and Dissolution of the World. Ray was also highly regarded as a tutor and he communicated his own passion for natural history to several pupils. Finally, in , he removed to his birthplace at Black Notley , where he afterwards remained. His life there was quiet and uneventful, although he had poor health, including chronic sores. Ray kept writing books and corresponded widely on scientific matters. He lived, in spite of his infirmities, to the age of seventy-seven, dying at Black Notley. He is buried in the churchyard of St Peter and St Paul where there is a memorial to him. In the spring of Ray started together with Willughby and two other pupils Philip Skippon and Nathaniel Bacon [10] on a tour through Europe , from which he returned in March , parting from Willughby at Montpellier , whence the latter continued his journey into Spain. Ray himself published an account of his foreign travel in , entitled Observations topographical, moral, and physiological, made on a Journey through part of the Low Countries, Germany, Italy, and France. From this tour Ray and Willughby returned laden with collections, on which they meant to base complete systematic descriptions of the animal and vegetable kingdoms. Willughby undertook the former part, but, dying in , left only an ornithology and ichthyology for Ray to edit; while Ray used the botanical collections for the groundwork of his Methodus plantarum nova , and his great Historia generalis plantarum 3 vols. The plants gathered on his British tours had already been described in his Catalogus plantarum Angliae , which formed the basis for later English floras. In , he presented the research of Francis Jessop on formic acid to the Royal Society. In this volume, he moved on from the naming and cataloguing of species like his successor Carl Linnaeus. Ray gave an early description of dendrochronology , explaining for the ash tree how to find its age from its tree-rings. Thus, no matter what variations occur in the individuals or the species, if they spring from the seed of one and the same plant, they are accidental variations and not such as to distinguish a species. Animals likewise that differ specifically preserve their distinct species permanently; one species never springs from the seed of another nor vice versa".

Chapter 2 : The wisdom of God manifested in the works of the creation / - Biodiversity Heritage Library

The Wisdom of God Manifested in the Works of the Creation: In Two Parts VIZ. The Heavenly Bodies, Elements, Meteors, Fossils, Vegetables, Animals.
