The first part of the book outlines the underlying theory of the art of music production. The second part focuses on the practical aspects of the job including training, getting into the business, day-to-day responsibilities, potential earnings, managers, lawyers, and - most importantly - the musical, financial, and interpersonal relationships producers have with artists and their labels. The book also features many revealing anecdotes about the business, including the stars and the challenges from daily to career-related a producer faces. Burgess addresses the changes in the nature of music production that have been brought about by technology and, in particular, the paradigmatic millennial shift that has occurred with digital recording and distribution.
