Chapter 1 : Radionuclide monitoring in Northern Ireland of the Chernobyl nuclear reactor accident - CORE

Full text of "Thirtieth detailed annual report of the Registrar-General (Ireland): containing a general abstract of the numbers of marriages, births, and deaths registered in Ireland during the year ".

The resultant radiation doses represent less than one per cent of those received by a Northern Ireland individual over a period of 40 years from natural background radiation sources. The added risk to any individual from the Chernobyl accident will therefore be very small and may best be judged in the context of the enormously greater risk of death due to potentially preventable diseases, such as smoking-related lung cancer, and coronary heart disease Topics: Sorry, we are unable to provide the full text but you may find it at the following location s: Suggested articles Citations A statistical analysis of selected parameters for predicting food chain transport and internal dose of radionuclides: A compilation of early papers by members of NRPB staff about the reactor accident at Doses from intakes of radionuclides by adults and young people.
