If you want to have a free, broader application set for creating documents, go to calendrierdelascience.com OpenOffice is entirely free and has a nice suite of applications that can also open MS Office files and export or save as MS Office files.

So I looked around for a tutorial or a video or something. I found some simple pop up tutorials, but nothing like this. So I stared at the photo, imagined the pieces in my head, moving them around until they fell into place and suddenly, I KNEW. I opened up Adobe Illustrator, and began to draw. First the trunk and leaves, then the extra leaves, and finally the base. I uploaded the files to Cricut an hour later and tried to put it together. It all just slid right into place. You can see the first tree I made below in all green. Once I had a basic sliceform design down, I made it pretty by adding in blossoms, the fence, and the base. I designed everything on my own, from top to bottom. And I am happy to share it with you! It is a fascinating way of creating 3D paper sculptures, and I plan to explore it further. Read my full disclosure policy. All the card stock I used was 65 lb. Step by Step I made a video of the entire pop-up tree card assembly process. I recommend you watch it to see how it all comes together. Be sure to click Select All and Attach on each file before you cut it to keep it all in the proper places. Be aware that it will take a couple of hours to cut out these intricate files on a Cricut. The reason for this is that the outlines of the shapes are on the higher layer than the details to force the outline to cut out last. I do this on purpose, because if the outlines were to cut first, your paper may slip on the mat when cutting the details. Having problems loading or cutting the files? You may just not have enough system memory there are a lot of intricate cuts in my files. The simplified files are also appropriate for those of you who are cutting it out by hand. Start with the tree trunk piece that has a slot at the top and glue the foliage that is separated into two half onto the branches. When gluing, be careful to avoid gluing over the slot and note that no branches should be peeking out from the foliage. Put glue on the branches and attach the foliage to it rather than the other way around. Set aside to dry. Next, glue the foliage onto the other tree trunk piece. Here is a diagram showing which way the pieces go together. Once the fence is assembled, fold the tabs up so they are even with the bottom of the fences and pointing away from the fence assembly. The fold lines are indicated by red dashed lines in the diagram above. Now slide each set of fence tabs into the outer slots on the card base, then tape down from the underside. The corner pieces go inside, while the pieces with one straight edge go on the outside. Stand it up to make sure it is stable. First carefully fold it in half, then glue the tabs not the thin connection piece, and place over the bottom end of the tree trunk with the lower slot. Notches are cut into both trunks that will allow this bridge to fit snugly over and in the trunk pieces. When done, stand it up to make sure it is still stable. Now assemble the trunk support pieces, which go together similar to the fence pieces. Here is a diagram of how the trunk support pieces get slotted together. Once the trunk support is assembled, fold the tabs up so the bottom of the tab is even with the bottom of the support. Put the trunk support on the bottom of the tree trunk by inserting the folded tree into the support from the top, then slotting the tree into the support from the bottom. Slide the trunk support bases into the inner slots on the card base and tape down from the underside. Stand the assembled tree up put heavy objects on the base if necessary to keep it stable. Now slide in the foliage slices as shown in the diagram below. Now test the opening and closing of your base to make sure your pop-up is working as intended. Make any adjustments necessary now before you move on to the next step. Glue the two pieces of white 8. Finally, add the two pieces of 9. The cutting is really the most time-consuming part of this project assembly is about 30 minutes tops. Best Answer: Are you meaning a document? If i'm getting this, you can use text edit to type up documents, it's limited but it does come with a range of formatting options that are useful and the basics.

Can the iPad be used to type documents? Can it open and save Microsoft Office files? Can it open and save PDF files? The iPad most certainly can be used to type documents. Although Apple subsequently has released versions of these apps for the iPhone and iPod touch, the small displays make the software much less convenient for more than basic review and quick edits of documents, even with the assorted zoom functionality. The iPhone and iPod touch models also can be used with keyboards, but when combined with the larger display, an external keyboard makes it possible to comfortably compose full documents on the iPad. However, it also is worth noting that because iOS software commonly is designed for use without a keyboard, some apps may be awkward or "clunky" when used with a keyboard and allow some actions from the keyboard whereas others will require touching the screen. Those used to typing on a Mac and using lots of key commands may be disappointed by the iPad experience. For those who use Microsoft Office on a Mac or Windows PC, and assuming full crossplatform compatibility and advanced features are important, the official software is the best choice by far. Originally, Office for iPad was free to download, but the free version only allowed you to read Word, Excel, and PowerPoint files. Editing files or creating new ones required an Office subscription. However, on November 6, , Microsoft relaxed this requirement and made basic editing free for consumers, with more advanced business features still requiring Office . Starting today November 6, , people can create and edit Office content on iPhones, iPads, and soon, Android tablets using Office apps without an Office subscription. Of course Office subscribers will continue to benefit from the full Office experience across devices with advanced editing and collaboration capabilities, unlimited OneDrive storage, Dropbox integration and a number of other benefits. In addition to helpful reviews from Macworld and ArsTechnica , you also may find this demo video from Microsoft worthwhile to see the software in action: Originally only Pages supported saving documents in Word format, but Numbers and Keynote did not support saving documents in Excel or PowerPoint, respectively. Thankfully, this subsequently has changed and Numbers and Keynote now both can save files in the equivalent Microsoft format. More recent Apple marketing copy shamelessly declares that these apps "now work even better with Microsoft Word, Excel and PowerPoint. Always optimistic marketing copy aside, the straightforward lists of exactly what works, may work, and does not work definitely is welcomed and should help users have realistic expectations. Likewise, from the extensive number of "partially" supported and unsupported features when converting between formats, it is clear that experiences still will continue to vary significantly. Although the professional opinions below are referring to the original release of the iWork suite for iPad, they still do an excellent job demonstrating the range of possible translation outcomes using the official Apple solutions. When I downloaded the template for the Word document I am currently using for this review, the iPad automatically asked if I wanted to convert it to a Pages doc. When I did, I was immediately using a doc that looked exactly like my original Word document. This is a serious content creation app that should help the iPad compete with laptops and can import Microsoft Office files. In one case, the exported Word file had misaligned text. When I then tried exporting the document as a PDF file, it was unreadable. In addition to the official solutions, two other translation apps include Documents To Go from DataViz , which has been providing Mac format translation software for decades, and newcomer QuickOffice , which now is owned by Google. More recently, Apple released newer "dumbed down" versions of Pages, Numbers, and Keynote in an effort to bring more parity between the Mac and iOS versions. Although this may have been well meaning -- the backlash from consumers was swift and substantial -- and Apple promised to bring back at least some of the features removed or broken by the new release. Since then, some features have been added back, but the software remains a work in progress. When using any version of Pages, Numbers, or Keynote for the Mac, changes typically are more minor than those converting between Microsoft applications and their Apple equivalent, but some of these changes still are quite significant. Likewise, removing the comments in a presentation could

range from frustrating to devastating if you were planning to review them prior to your presentation and only then discovered that they were gone. As Apple makes the applications for both systems, and the company no doubt wants to encourage sales of both Macs and iPads -- or at least encourage migration from the Mac to the iPad -- one certainly would hope that compatibility will continue to improve as long as Apple views Mac compatibility as important for iWork. It certainly appears that the company continues to work on this goal. Compatibility of the original version definitely was overstated, as the below journalists note. If you are planning on buying an iPad to be a portable editing device for your iWork content -- think twice. The Apple Discussion boards are all aflutter with teachers and professors who hoped they could leave their laptops in the office and only take their new iPads to the lecture hall. This is not the case. Although Apple has branded the programs the same as the versions you can buy for your Mac, this is where the similarity ends. Formatting is lost in Pages so formulas and footnotes disappear in Keynote transitions and builds go away. It is not as if they are temporarily suspended while on the iPad they are gone so when and if you save back to your Mac they are no longer there. Thankfully, this previously permanent file change issue has been rectified. You now will be "prompted whether you would like to open the original version or to create a copy, and changes made to the content or document layout are listed for your review. As always, keep a backup of a file before attempting to convert between any formats. It may be of interest, too. With the official Microsoft Office for iPad software, when combined with an Office subscription and a physical keyboard, it is simple to read, edit, and create Word documents, Excel spreadsheets, and PowerPoint presentations, generally even in a collaborative environment where documents will be sent back and forth between multiple parties for revision. Translation efforts are improving, but as they always have been since the dawn of time, work best for simple documents.

Apple sells a wireless keyboard designed for use with its devices, including the iPad. The keyboard requires two AA batteries and is designed to be energy-efficient. Some functions that the keyboard can perform with Apple computers may not be available for use with the iPad.

How the organization is set up will directly impact the success or failure of said company. They need to be structured and organized in a way that will best meet their goals and needs. Apple functions under a collaborative structure. A collaborative business structure is designed to bring parties together in a long-term relationship to achieve a common goal George, R. A collaborative work environment supports people in their individual and cooperative work. Functional organizational structure usually is better for small companies or those that focus on one product or service because it is not designed to change quickly and it works well in a stable environment not inclined to constant changes. Microsoft as of has a divisional organization, where each division or product focuses on a specific line of goods and services. Their approach is very different from Apple, where everyone collaborates to ideas to each division focusing in one thing and not being able to collaborate in other products or goods. Some of the advantages of a division structure can include easier cross-product coordination, more customer focus and reduce functional duplication. Also some disadvantages include cost, difficulty coordinating between corporate and division objectives and redundancy among groups. One example of a big corporation that still uses functional organizational structure is Dell. If you still have the original packaging for your MacBook, you can find the serial number on a barcode label on the box. The packaging also lists the Apple part number—for example, MLH72xx/A. Match that number to one in the list below to find your MacBook model.

Fowler, Washington Post, Posted: November 4, Japanese artist Mako Oke draws on the new iPad Pro using its pencil accessory after an event announcing new products Tuesday, in the Brooklyn borough of New York. AP Two slabs of glass and metal, two different tales. Apple shared its vision for the future of portable computers on Tuesday: Each was given a beautiful new design, renewed purpose and a 20 percent price hike. The new Pro takes design cues from the latest iPhones. That was speedy in demonstrations but is limited to just two faces per device. On stage, Apple described the iPad Pro as a "magical piece of glass that can be anything you need it to be. The iPad Pro is a powerful, flexible computer that you can carry around. With a new Apple-designed processor and neural engine, Apple says the Pro is faster than 92 percent of portable PCs on the market today. Can it really be "anything" you need it to be? The iPad Pro can even plug into an external monitor via a new USB-C style port also used to charge to become a portable graphics workhorse. Executives from Adobe showed how it could be used to edit a gargantuan image with a new full-powered iPad version of its popular Photoshop application. But you know what I quickly missed in my hands-on time? A mouse or trackpad. You still have to do most things on an iPad by touching its screen—no fun for precision tasks like spreadsheets. To me, that stops the Pro short of transforming into the kind of computer where I can sit upright at a desk and burn through work. Enter the refreshed MacBook Air, the beloved Apple laptop. The standout feature is a higher-resolution inch "retina" quality screen, which features four times the pixels. The new Air, which weighs 2. When I held one in each hand, I could feel the difference. The refresh also includes a fingerprint reader for securely unlocking the computer, making payments and logging into apps. Instead, it has two smaller USB-C type ports that work for charging and plugging in external devices. The Air has a bigger problem: It looks expensive in the competitive world of Windows PCs and Chromebooks yet has few totally unique hardware capabilities. A decade ago when Apple cofounder Steve Jobs introduced the Air by pulling it out of a manila envelope, he redefined the design of portable computers. November 4, - 5:

If you need to write a letter on your Macbook Pro, look no further than Apple's TextEdit application. This text editor, included with all versions of Mac OSX operating system, allows you to type, edit and format text.

By Neil Hughes Friday, November 20, , Yes, you can open apps and scroll and do all general purpose navigation on the iPad Pro with Apple Pencil. This includes all apps that were not designed for the Pencil. Flicking the stylus as you would your finger invokes momentum scrolling in exactly the same way. Long presses are also acceptable, meaning you can use the Pencil to delete apps or open a link in a new tab. Scrolling works fine in any app, as does palm rejection. You cannot access edge gestures like Notification Center or Control Center Swiping with your Apple Pencil from the top or bottom of the screen does nothing. Swiping from the right side of the screen gives no response either. You also cannot resize apps in Split View with the Pencil. That includes entering URLs in Safari, searching in the App Store, and similar text entry functions in any other apps. The Pencil can also be used to drag down on the home screen to bring up Spotlight search. And you can scroll to the left to access search and Siri Suggestions. If you want to bypass Touch ID, you can also pick up your Pencil to enter your lockscreen password. Palm rejection works everywhere Want to rest your hand on the screen and use the Apple Pencil while you scroll in Safari? Put your hand on the iPad Pro display while you navigate the home screen, type on the keyboard, or doodle in Notes. You can charge your Apple Pencil with a regular Lightning cable Though it includes a male Lightning plug for recharging directly via the iPad Pro, Apple has also included a female-to-female Lightning adapter in the Apple Pencil packaging. Yes, you can trace through a piece of paper Scribbling on an iPad Pro through a standard sheet of computer paper. If you want to put a piece of paper on top of your iPad Pro and trace to draw, you can do that. We tested with a standard sheet of computer paper, and it worked fine. Depending on the thickness of the paper, you may want to turn up the brightness to allow the display to show through the paper. Palm rejection works with paper atop the iPad Pro as well. Apps instead must include an eraser option in software. You can use the Pencil to select that, and then erase accordingly. The Pencil cannot replicate all five of your fingers, clearly. Or, just press the home button. With your Pencil, if you want. The iPad Pro features a lower-latency display using a bespoke subsystem, sampling Pencil-to-screen interaction at times per second. The iPad Pro only uses that high sample rate when it senses the Apple Pencil is in use, and then scales back to half that when a fingertip is being used. None of that technology is found in your iPhone 6s or iPad Air 2.

I have a 12" MacBook and an iPhone 7+, and I take the MacBook with me everywhere that I would take an iPad. But it is a very personal decision. You say you have a MacBook Pro, which even if it is the 13" is still quite a bit larger than the 12".
