Chapter 1 : Medical Health resume in Sharjah, Sharjah Emirate, United Arab Emirates - June

The Iraqi Board For Medical Specializations Is the main postgraduate Medical University in Iraq. Its role is to find a creative generation of postgraduates in different fields of.

The IIC probably never developed formalized procedures for coordinating industrial efforts and its overall strategy and mechanisms for project implementation probably were somewhat nebulous even to its own participants. Looting, vandalism and destruction of documentation have complicated ISG efforts to fully understand the role of the IIC and its subordinate projects. A complex, interdependent web of constantly evolving committees, projects and commissions was responsible for national research and development for indigenous production of chemicals, based on ISG analysis of documents and reporting. After all preliminary research had been reviewed, both the Evaluation Research Committee and the Central Evaluation Research Committee were disbanded and the research was passed to the Technology Transfer Committee, according to reporting. The Research and Development Committee provided oversight for chemical research for the strategic research program, according to documents and reporting, and was responsible for prioritizing projects based on economic benefit and feasibility, according to different reporting. Other committee members included Drs. Karim of Al Razi Center, Dr. Asawa of the Ministry of Industry, Dr. The Technology Transfer Committee, established in , was responsible for researching and acquiring strategic technologies from outside Iraq. This committee tracked foreign technological developments by targeting students, attending trade shows and sponsoring educational exchanges, according to reporting. Different reporting indicated the Technology Transfer Committee was responsible for the coordination of all medical and agricultural research in Iraq. The Technology Transfer Committee appeared to share or subsume the responsibilities of the Research and Development Committee probably because Dr. The Follow-Up Committee for Pharmaceutical Research This subcommittee was responsible for reviewing research reports, evaluating scale-up feasibility, and evaluating quality control testing of samples. It reported directly to Dr. Once the committee approved the research results, the organization received full payment for the work, according to Dr. The IIC was tasked to carry out several joint activities with this group of industrialists, including the setting up of a study to provide the correct requirements to the industrialists, based on documents recovered by ISG. Three types of commercial products were targeted for indigenous production under the NPPP. Two categories of required chemical research for the above products were identified. Research on such technologies would focus on formulating products for which Iraq already had the ingredients. Humam proposed the project to Saddam in a letter in which he indicated that he had many skilled chemists with little to do, according to reporting. According to a former high-ranking employee of MHESR, the chemicals were needed because Iraq could not obtain them under sanctions after However, few of the hundreds of chemicals identified were restricted by sanctions. The Technology Transfer Committee headed by Dr. The Committee stimulated work which lead to additional areas of research activity, according to the same reporting. In contrast, other regime programs promoting individual scientific achievement probably were corrupted by special interest groups who stood to gain financially or personally for successfully lobbying chosen projects irrespective of scientific merit. If a knowledgeable person did not step in to put a halt to a scientifically invalid project, the project would proceed. Additionally, the special interest groups found ways to bypass the mechanisms intended to prevent unsound projects by suppressing bad results and evidence of failed tests, and by concurrently highlighting any experiment that was even partially successful. Although the experiments were conducted with a craft not used by any potential enemies, and only one of several tests was even partially successful, the project was considered a success and the system was ordered into unit production. Although the MIC and the MIM were separate ministries, they cooperated on military issues including equipment, spare parts, projects and vehicles. The scientific capabilities of the MIC and the MIM were comparable and most chemical research could be tasked to either, although pharmaceutical work was typically assigned to MIM, while pesticides research and production was usually delegated by MIC,

Chapter 2 : calendrierdelascience.com Badie Al Fikry | Canadian Specialist Hospital, Dubai, UAE - Hospital

Iraqi Commission For Medical Specializations, Baghdad, Iraq. College & University.

Map Dr AbdulMajeed Alwan Hammadi is a well-experienced and seasoned haematologist with a lot of successful works to his credit. After that, he was admitted into the Iraqi board of internal medicine for a post graduate study in the year He obtained a degree at the board of internal medicine in then moved to Basra in south Iraq as the head of medicine department in ibn majid hospital. This increased is knowledge in the medical field and at this point in his life, he ventured into the main task of his life, to fulfil the dream of getting bone marrow transplantation center in Iraq. In this bid, he encountered a lot of problems and troubles and faced strong contentions and objections from many health officials as Iraq was under an embargo from since the Kuwait invasion. After series of courses and training with Prof. Husam Kamel in Egypt, Dr. Alberto Bossi in Italy, He was able to do first case of BMT in January after which things became very complicated after changing the regimen in Iraq and were not able to do any further case. Because of the change in they did not allow his team to do any further bone marrow transplant on the basis that the infrastructure is bad and the security is not stable. On the 14th of August, , without permission from the ministry of health, He invited prof Marino Andolina pediatric immunologist from Trieste Italy to Baghdad to do the first autologous BMT in Iraq for a relapsed lymphoma case in Iraq. In , he and his team started the bone marrow derived stem cell therapy in Iraq for spinal cord injuries, multiple sclerosis, muscular dystrophies, and others. He was the director of the bone marrow transplantation unit at the medical city hospital in Baghdad from till Furthermore, he is a chief pioneer of the stem cell transplantation in Iraq and a pioneer of the stem cell therapy in Iraq as well. He is currently the Head of the stem cell centre in Baghdad. He has written and partook in some notable Medical Journals and Publications. No doubt, Dr AbdulMajeed Alwan Hammadi is an expert in his field and a medical practitioner to the core. Sechenov â€” Moscow medical Academy, in the year Acting as a G. Dr Zaid also partook in different minor operations in that place. He also worked as a G. He successfully carried out an orthopaedic surgery in his private clinic in Baghdad, which ended successfully on April 20th, At Al-kindy teaching hospital, he served as a senior orthopaedic surgeon, managing different traumatological operations, especially blast injuries of soldiers and civilian in Iraq. He was performing special works in arthroscopic operations of the knee joint, treatment of meniscal injuries, removal of foreign bodies, reconstruction in arthroscopic surgery. He is currently working here as a senior orthopaedic surgeon and as a manager of the arthroscopic department, teaching and training post-graduate doctors on arthroscopic operations, meniscal injuries removal of partial meniscotomy or suture. Dr Zaid is also into the removal of foreign bodies and managing of cartilage defects by microfracturing and injection of stem cells or PRP. He has mastered the ACL reconstruction with DEPUY technique curved rigid fixed pins for femur and bio-absorbable sheath and screw for the tibia and other arthroscopic operation. Dr Zaid Ali Jasim Shaban is a man of quality experience and honours. He started his career as a house officer at Al-rasheed teaching hospital and continued until he became a senior house officer in the same hospital. Dr Mazin later joined the Iraqi commission for medical specialization, from till He departed Iraq in because of the war and instability in security to the United Arab Emirate where he worked in governmental and private hospitals. In , he came back to Iraq and established his own private centre Heart Specialty Clinic which is still running till date. He can speak fluently and communicate in both the English and Arabic Languages. Over the years, Dr Mazin Shakir Mahmood has been a consistent medical practitioner with a lot of successful works to his credit. You are assured of getting quality services from him, in line with his medical specialization and all it entails. No Records Found Sorry, no record were found.
