Value End Sub If you are interested in learning more about how to create, record and use macros, I would suggest that you go here for some resources. So when should you use macros as the VS extensibility model? The scenarios that are great for using macros are those where you are trying "script" Visual Studio to automate certain tasks, provided that you can accept several limitations: Macros can only be written in VB. To share macros with others, you must give them your macro projects which will include source code. Since the user of the macros can see the source code, there is no protection of your intellectual property. Some extensibility scenarios cannot be achieved via macros. For example, you cannot create a new tool window, a new editor or a new project system via macros. Scripting the IDE is powerful and often useful in many scenarios. Add-ins Similar to macros, add-ins also leverage on the automation object model of Visual Studio. In implementation, you also have the choice of creating add-ins in C , VB. There are many great add-ins in the community today. Visual Studio Hacks has a list of interesting add-ins here. A couple of student interns from the C team has created some interesting add-ins that enhances code navigation and editing. As you can see, add-ins can be used to build tools and features that support a large number of scenarios. The automation object model is extremely powerful. This deep level of integration allows developers to build everything that add-ins enable, plus more. By the way, the Visual Studio SDK is a great way to start learning about how to use this powerful mechanism to deeply integrate with Visual Studio. You can view the online documentation here. Normally, in order for a VSPackage to load, it needs to have a unique PLK that matches several pieces of information about the package. So while you are developing your VSPackage, it may work perfectly, and then when you deploy it to other machines, your VSPackage may fail to load. The PLK is generated based on the following pieces of information:
