Heuristic Evaluation Chapter 9. Usability Testing Chapter Other Tools and Techniques Chapter

We had talked about putting all the wireless stuff into one chapter, but the more I think about it, it makes more sense to not treat wireless technology differently than anything else. So "wireless stuff" can be integrated into the whole book. Since when the wireless usability book came out, "wireless" has started to converge with "wired" for a variety of reasons.

Introduction to Usability This will be chapter 1 from 1st Ed. Also will include mention about new ISO and ANSI definitions of usability and a critical analysis of them, implications for compliance, etc.

Human Factors Some of the material from the 1st Ed.

User-Centered Design This is essentially chapter 3 from 1st Ed. More discussion about needs analysis, and a discussion of utility versus usability

Ok, I can use this site, but why? Usability-Aware Design This chapter is a synthesis of chapter 5 and new material from research since It will be in the same spirit as the 1st Ed. A common complaint about the 1st. Accessibility Chapter 9 fromm 1st.

Understanding Your Users and Goals Info culled from other chapters; new info about developing baselines for usability, material on participant recruiting, optimum sample size for studies, a better discussion on user profiles, and some discussion of statistical techniques for sample selection. Also, understanding what you can infer from experimental data; the role that heuristics play in the development cycle versus classical testing

Chapter 7. Usability Metrics This will include almost all new material referencing literature since Single usability metrics SUM techniques; determining what are appropriate metrics for usability task completion? The main thrust of this chapter is going to be "How do I take all this data and actually say something meaningful to the management about it?"

Heuristic Evaluation Chapter 6 from 1st Ed.

Usability Testing Chapters 7 and 8 from 1st.

Other Tools and Techniques This is partially chapter 3 from 1st. Probably a good bit of reworking on the chapter 3 material.

Transforming Data Into Change Something that the first ed. I may have problems getting this where I want it but I need to make a better attempt this time around.
