Chapter 2 : How to Make a PowerPoint Template: 12 Steps (with Pictures)

This wikiHow teaches you how to create a link to online content in various ways. You can copy and paste a website's address to create a link to the site, add a link to an email in order to hide the link's address beneath text, or program a link into a website using HTML.

Additional information Create a form from an existing table or query in Access To create a form from a table or query in your database, in the Navigation Pane, click the table or query that contains the data for your form, and on the Create tab, click Form. Access creates a form and displays it in Layout view. You can make design changes like adjusting the size of the text boxes to fit the data, if necessary. For more information, see the article on using the form tool. Create a blank form in Access To create a form with no controls or preformatted elements: On the Create tab, click Blank Form. Access opens a blank form in Layout view, and displays the Field List pane. To add a field to the form, double-click it or drag it onto the form. To add several fields at once, hold down CTRL and click several fields, and then drag them onto the form at the same time. The order of the tables in the Field List pane can change, depending on which part of the form is currently selected. If you are not able to add a field to the form, try selecting a different part of the form and then try adding the field again. Use the tools in the Controls group on the Form Layout Tools tab to add a logo, title, page numbers, or the date and time to the form. If you want to add a wider variety of controls to the form, click Design and use the tools in the Controls group. Working with split forms gives you the benefits of both types of forms in a single form. For example, you can use the datasheet portion of the form to quickly locate a record, and then use the form portion to view or edit the record. The two views are connected to the same data source and are synchronized with each other at all times. To create a new split form by using the Split Form tool, in the Navigation Pane, click the table or query that contains the data, and then on the Create tab, click More Forms, and then click Split Form. Access creates the form and you can make design changes to the form. For example, you can adjust the size of the text boxes to fit the data, if necessary. For more information on working with a split form, see the article on creating a split form. Create a form that displays multiple records in Access A multiple item form, also known as a continuous form, and is useful if you want a form that displays multiple records but is more customizable than a datasheet, you can use the Multiple Items tool. In the Navigation Pane, click the table or query that contains the data you want to see on your form. Access creates the form and displays it in Layout view. In Layout view, you can make design changes to the form while it is displaying data. For example, you can adjust the size of the text boxes to fit the data. For more details, see Create a form by using the Multiple Items tool. Create a form that contains a subform in Access When you are working with related data that is stored in separate tables, you often need to view data from multiple tables or queries on the same form and subforms are a convenient way to do this. Since there are several ways of adding a subform depending on your needs, for more information, see the article Create a form that contains a subform a one-to-many form. Create a Navigation form in Access A navigation form is simply a form that contains a Navigation Control. Navigation forms are a great addition to any database, but creating a navigation form is particularly important if you plan to publish a database to the Web, because the Access Navigation Pane does not display in a browser. Open the database to which you want to add a navigation form. On the Create tab, in the Forms group, click Navigation, and then select the style of navigation form that you want. Access creates the form, adds the Navigation Control to it, and displays the form in Layout view. For more information, see Create a navigation form. Additional information There are several options that you can use to customize your forms, see if some the following fit your needs: Options See this resource If you want to be able to select which fields appear on the form, use the Form Wizard to create your form.

Chapter 3 : Can I Create a *calendrierdelascience.com Wildcard? How About *.*calendrierdelascience.com
