XIII. Northern and Western Europe EIA/ARI World Shale Gas and Shale Oil Resource Assessment June, XIII-3 1. PARIS BASIN Introduction The Paris Basin of France is a large 65,mi² intra-cratonic basin that encompasses.

By Matt Walker 15 June Not so long ago, a sailor navigating the cold waters of the northern Pacific Ocean might have had every chance of being confronted by a giant cow. This cow would have measured 10 metres long, and weighed between five and ten tonnes. And it would have been the most adept swimmer, spending its days cruising the seas, grazing on fields of grass growing underwater. It is now extinct, having left this earth almost years ago. But many people are unaware that such a huge and extraordinary creature once existed, or know its incredible story. And even today, scientists are still discovering fundamental insights into the life and history of this huge, lumbering, but almost mystical animal. It belonged to a different group of mammals, known as the Sirenia, named after the mermaids of Greek mythology that were known as sirens. Today, four species of Sirenia still exist, grouped into two distinct families. One, the dugong *Dugong dugon* of South East Asia, measures some 3 metres long, weighing around kg. View image of The Amazonian manatee, *Trichechus inunguis* Credit: These can grow to 4 metres long and weigh almost kg, and the three species of manatee are more closely related to each other than the dugong. All have large rotund bodies, downturned snouts, short rounded paddle-like flippers, and a horizontal tail fluke that they use to move around. It reached a length of 10 metres and different sources suggest it could have weighed anywhere between 4, kgs. It also lacked teeth, surviving by using a pair of broad horny pads to chew kelp. View image of West African manatees *Trichechus senegalensis* credit: They documented its habits and number, with estimates suggesting that perhaps or fewer lived around the island. The dugong now survives as the only truly herbivorous marine mammal Like its modern relatives, the sea cow aggregated in herds. That and its slow-moving, almost docile behaviour made it easy prey. The sea cow was studied by a single scientist, Georg Steller, after whom the species is named. View image of The West Indian manatee, *Trichechus manatus* credit: Each year new expeditions hunted the animals. One report stated that one sea cow could feed 33 men for a month, and it was thought sailors stored the meat on ships to feed themselves on voyages lasting up to a year. Earlier in their history, the first sirenians may have been hippo-sized Incredibly, the last sea cow was reported killed in , just 27 years after the island and species had been discovered by modern man. Scientists have since tried to establish whether these hunting expeditions killed off the sea cow, or whether other factors played a role. View image of Sea otters have a taste for sea urchins credit: But studies now suggest this was unlikely and humans did hunt the sea cows far faster than they could reproduce. Hunters may have even killed seven times as many sea cows as they could eat, using wasteful primitive hunting methods, assuming there was an almost infinite supply. The dugong now survives as the only truly herbivorous marine mammal, as manatees often frequent fresh water. There is one other extraordinary thing about these animals: Earlier in their history, the first sirenians may have been hippo-sized, four-legged animals that waded into the water to feed on marine algae and sea grasses, learning to swim, only later evolving truly aquatic bodies.

Chapter 2 : Encyclopedia of Marine Mammals - PDF Free Download

nike women air jordan 13 xiii. Get the freshest colorways of men s Jordan shoes, sneakers and flip-flops at. He needs to get out and he seems to like you.

January Jordan Release Dates. It is better to go unnoticed for as long as we can, until we find a new home. Free 2-day Shipping On Millions of Items. The dog raced to the old foundations, and disappeared down the stairs. All items are on sale. Every instinct screamed at her to run after Jagr and wrap her arms around him. And I hope it stays that way. They stood stoic trying to stare me down. Rubbing his chin, Bryce leaned back in his chair. They began with French Blue, moved. The Air Jordan 13 was released in which was the last season that Jordan played for the Bulls. The Air Jordan 1 was first produced for Michael Jordan in It was designed by Peter C. The red and black colorway white red air jordan xiii of the Nike Air Ship, the prototype for the Jordan 1, was later outlawed by NBA Commissioner David Stern for having very little white on them this rule, known cheap air max 1 vip as the 51 percent rule, was repealed in the late s decade. It is a common misconception that the Jordan. Find great deals on online for air jordan 13 white red.

Chapter 3 : The Balcony Las Olas Restaurant - Fort Lauderdale, FL | OpenTable

A companion volume to the author's Natural history essays, which dealt with the fauna of Africa, only. cf. Pref I. The spectre tarsierll. The vampire batlll.

Minke Whales Balaenoptera acutorostrata and B. Boyd University of St. Buckland University of St. Janik School of Biology, University of St. Powell Wildlife Trust St. Taylor Wildlife Trust St. A number of illustrations of marine mammals, kindly provided by Brett Jarrett, are reproduced as they appeared in Jefferson et al. In addition, authors were given the opportunity to update their chapters, and nearly all took advantage of this to include the latest research results. It is no surprise that we are fascinated and intrigued by these creatures. Such fascination and curiosity brought us, the editors, to the study of marine mammals at the beginning of our careers, and they keep us excited now. Observations on the biology of marine mammals expanded throughout the Middle Ages, usually mixing freely with imagination and superstition. Next to rhinos and seals, it also depicts the unicorn, the fabled mix of a horse and a narwhal. Interest greatly increased with the advent of hunting marine mammals on a large scale. From these roots, marine mammal science has grown exponentially, especially since the Second World War. Unlike in earlier days, most contemporary research on marine mammals is carried out by observing living animals. Modern marine mammal studies combine aspects of mammalogy, ethology, ecology, animal conservation, molecular biology, oceanography, evolutionary biology, geology, and "in effect" all major branches of the physical and biological sciences, as well as some of the social sciences. This enormous breadth unfortunately necessitates that most marine mammalogists specialize, concentrating on one or a few aspects of marine mammal science and limiting the number of species that they study. Therein lies the second reason for compiling this encyclopedia: As editors, we constrained what authors wrote as little as possible, applauding diversity and keeping to minimal guidelines. We consider modern marine mammals to include the mammalian order Cetacea including whales, dolphins, and porpoises , the order Sirenia dugongs and manatees , and many members of the order Carnivora: We asked the authors to follow Rice for the species-level taxonomy and nomenclature of the modern marine mammals with certain exceptions, as noted in the Marine Mammal Species list , as his work is an excellent, generally accepted listing of diversity. There is some overlap among the articles. This is not an accident. We urge the reader to use the crossindexing to peruse different accounts relating to the same question; on some matters the jury is still very much out, and the range of views is interesting and important. Ours is an encyclopedia, an alphabetically arranged compilation of articles that are independent and multiauthored, the only such work on marine mammals. However, some other recent books form excellent complements to our work. For example, Handbook of Marine Mammals S. Harrison, Academic Press, " is a series of compendia presenting descriptions of the marine mammal species. Biology of Marine Mammals J. Reynolds III and S. Rommel, Smithsonian Institution Press, presents an overview of marine mammals based on a number of long review chapters. Sumich, Academic Press, presents a current review of the evolutionary aspects of marine mammal science in a textbook format. We hesitated before agreeing to edit this encyclopedia. We three are all cetologists: But we rub shoulders with those who do know much about these things, in our laboratories and universities, in advisory bodies, and at conferences, so we were considered to be in a good position to elicit and edit articles from our colleagues. The project has been fatiguing xxxii Preface to the First Edition and sometimes exasperating but elevating nonetheless. We have learned a lot along the way. We owe a great deal to many people. First we thank our editors at Academic Press: Chuck Crumly the Encyclopedia was his concept and owes its existence to his drive , Gail Rice, and Chris Morris, who all put up bravely with our editing and publishing amateurism and endless missteps and interventions. A very large number of colleagues acted as anonymous peer reviewers for the articles. But the most credit must go to the authors, who gave so freely of their time and expertise. The Encyclopedia is appropriately an international project: If this work so affects you, it will have been successful. We also hope that it will help stimulate our growing cadres of young colleagues, naturalists, conservationists, and citizens of earth to contribute to the efforts to save and protect these marvelous creatures of the seas. Each article in the Encyclopedia provides an overview of the selected

topic to inform a broad spectrum of readers, from researchers to students to the interested general public. In order that you, the reader, will derive the maximum benefit from the Encyclopedia of Marine Mammals, we have provided this Guide. It explains how the book is organized and how the information within its pages can be located. Articles in the Encyclopedia fall within seven general subject areas, as follows: All of the articles are arranged in a single alphabetical sequence by title. An alphabetical Table of Contents for the articles can be found beginning on p. As a reader of the Encyclopedia, you can use the alphabetical Table of Contents by itself to locate a topic. Or you can first identify the topic in the Contents by Subject Area and then go to the alphabetical Table to find the page location. So that they can be more easily identified, article titles begin with the key word or phrase indicating the topic, with any descriptive terms following this. The baculum os penis is a bone in the penis that occurs in small insectivorous placentals orders Afrosoricida, Erinaceomorpha, and Soricomorpha , Chiroptera, Primates, Rodentia, and Carnivora. The corresponding element in females is the little-studied clitoris bone os clitoridis , which has been documented for polar bears and several pinniped species, but presumably is present in all pinnipeds, and in marine and sea otters it is present in the northern river otter, *Lontra Canadensis*. Major headings highlight important subtopics that are discussed in the article. References to other articles appear in two forms: See Also the Following Articles: Review articles and research papers that are important to a more detailed understanding of the topic are also listed here. The Bibliography entries in this Encyclopedia are for the benefit of the reader, to provide references for further reading or additional research on the given topic. Thus, they typically consist of a limited number of entries. They are not intended to represent a complete listing of all the materials consulted by the author or authors in preparing the article. This section provides a complete list of living and extinct marine mammal species. This section provides biographical information for more than 50 noted scientists who made important contributions to the field of marine mammal study. This section provides definitions for more than specialized terms that are used in the articles. INDEX Within the subject index entry for a given topic, references to general coverage of the topic appear first, such as a complete article on the subject. References to more specific aspects of the topic then appear below this in an indented list. The site will continue to evolve as more information becomes available.

Chapter 4 : Nike Women Air Jordan 13 Xiii | Northern Clay Center

One of the most stunning Air Jordan 13 (XIII) to release, the Original Air Jordan 13 (XIII) White/True Red Black, which made appearances on Michael Jordan's during the season and movies. Cheap Air Jordan 13 (XIII), Air Jordan 13 (XIII) for Sale with lowest price at store.

Abstract. A companion volume to the authors' "Natural history essays, which dealt with the fauna of Africa, only. cf. Pref.I. The spectre tarsierII.

Please help improve it by removing unnecessary details and making it more concise. January Learn how and when to remove this template message

The first female U. Her assassin narrowly escapes after a shoot out involving a shadowy figure named La Mangouste Val Kilmer or "The Mongoose". Three months later in West Virginia , an elderly couple discover a young man Stephen Dorff who lies wounded in a tree and still in his parachute. He cannot remember his past and the only clue to his identity is a numerical tattoo on his chest, "XIII". With the elections just weeks away, a confirmed suspect could swing the vote for the administration. XIII takes out the soldiers one by one. While on the run in New York , he befriends Sam Caterina Murino , a photo shop owner who helps identify for him a woman in a photo he carries. Here he attempts to access a memory card found on his person in the hopes of discovering his identity and unknowingly initiates its tracking program. XIII later awakens to find himself restrained inside a truck where La Mangouste demands to know who he has spoken to. Escaping out of his hands XIII returns to Sam where she informs him that the design on his chest refers back to the ancient Roman Empire wherein secret societies would brand members loyal to their cause. She then gives him some photos that Kim Jessalyn Gilsig , the woman in the photo, had developed there, which convinces him to head upstate to Kellownee Valley. Meanwhile, government intelligence has identified XIII from video surveillance as Steven Rowland and plasters his face all over the media to weed him out. The goal of his assignment was to flush out a group of fascists plotting a coup to overthrow the American government whom Rowland had unwittingly been recruited for. During this time, Amos and his agents have the house surrounded and move in along with La Mangouste who fires at XIII, but misses and kills Kim instead. A televised presidential debate is interrupted to broadcast that XIII has been captured. Amos has XIII wired up and tortured in order to extract a confession out of him, but his pleas that he is not really Rowland are met with incredulity. He is taken back to his holding cell and while there it is discovered from his X-rays that he has had reconstructive surgery and that his military file is classified. Inside his cell he meets another member of the conspiracy, "XIV", who attempts to silence him once and for all, but he escapes with the help of Jones. He shows him photos of his wife and daughter whom he lost in the sarin gas attacks in Chicago , which was one reason he originally accepted the mission. Carrington also reveals to him that Col. Jack McCall Scott Wickware had previously supervised the paramilitary unit Rowland was involved with that orchestrated the foreign attacks at home and abroad in Haditha and that he had believed that the next major target of attack would coincide with the upcoming elections. He attempts to determine the location of the attack, but McCall commits suicide. Back at the safehouse, he and Jones evaluate the evidence, which points to a nuclear strike on election day at a Maryland polling station and inform Carrington, who gets into a heated exchange with Amos, after he accuses him of involvement in the cover up. He gets into a fight with La Mangouste and kills him. Back at the safehouse, XIII identifies the people who he saw at the meeting and tells Jones he overheard them make an enigmatic reference to the location that pinpoints the target as Bethesda, Maryland. Together they organize to thwart the plot. XIII then confronts Wax in his office who claims that it is only the beginning before he kills himself. Carrington is released from prison and Sheridan reveals in a press conference the details of the plot and those behind it. He later meets with XIII and thanks him for his service. Sheridan had his own sister killed to get the Vice President into the office. He then with the rest of the conspirators, coordinated attacks that made the President look bad in order to win a landslide victory, so they can take the United States down the slippery slope into fascism.
