*The Gelasian Sacramentary. Liber Sacramentorum Romanae Ecclesiae XLVIII. Feria iii 92 In Nat. S. Agapiti XLIX. In Nat. S. Magni L. In Nat. S. Rufii*

It is divided into five political wards , [47] which are often used by residents to identify their place of habitation. In recent years, residents have begun to identify with specific neighborhood names instead of the larger ward appellations. Nevertheless, the wards remain relatively distinct. Industrial uses, coupled with the airport and seaport lands, are concentrated in the East and South Wards, while residential neighborhoods exist primarily in the North, Central, and West Wards. Ward boundaries are redrawn, as needed, by a board of ward commissioners consisting of two Democrats and two Republicans appointed at the county level and the municipal clerk. The boundaries of the wards are altered for various political and demographic reasons and sometimes gerrymandered , especially the northeastern portion of the West Ward. Of these neighborhood designations only University Heights, a more recent designation for the area that was the subject of the novel *Howard Street* by Nathan Heard , is still in common usage. The Central Ward extends at one point as far north as 2nd Avenue. In the 19th century, the Central Ward was inhabited by Germans and other white Catholic and Christian groups. The German inhabitants were later replaced by Jews , who were then replaced by Blacks. The increased academic footprint in the University Heights neighborhood has produced gentrification , with landmark buildings undergoing renovation. The Central Ward forms the present-day heart of Newark, and includes 26 public schools, two police precincts, including headquarters, four firehouses, and one branch library. A row of residential towers with security guards and secure parking line Mt. Prospect Avenue in the Forest Hill neighborhood. The North Ward has lost geographic area in recent times; its southern boundary is now significantly further north than the traditional boundary near Interstate The North Ward historically had a large Italian population; demographics have transitioned to Latino in recent decades, though the ward as a whole remains ethnically diverse. It is home to the historic Fairmount Cemetery. The South Ward, once home to residents of predominantly Jewish descent, now has ethnic neighborhoods made up primarily of African Americans and Hispanics. Today, due to the enterprise of its immigrant population, the Ironbound also known as "Down Neck" and "The Neck" [58] is a destination for shopping, dining, and nightlife. The ward is largely composed of densely packed housing, primarily large apartment buildings and rowhouses. The January daily mean is The average seasonal snowfall is The July daily mean is The city receives precipitation ranging from 2.

*ACER, branches of? ACER, branches of? Lesquereux, Proc. U. S. Nat. Mus., Vol. XI, p. 15, A number of branches supposed to belong to some species of Acer, but.*

And the comics do it all the time. The First Avenger, mentioned that a sequel would likely be filmed after the completion of *Thor: The Dark World*, which would likely have been before the end of *George Nolfi*, *F. Gary Gray*, and brothers *Anthony and Joseph Russo*. The First Avenger on April 4, Disney stated, "The second installment will pick-up where You know, if the first movie was a movie about the US Army, then this is a movie about S. You will learn about S. Gary Gray withdrew his name from consideration, choosing instead to direct the N. A biographical film *Straight Outta Compton*. The writers thought this was a great story point, for implementing "the physical manifestation of Cap changing the world. This was a time that Cap existed in the comics. In the comics it was a hell of a journey for Steve. And in our film that takes the form of S. And we wanted to try and ground the movie as much as we could. That stuff was already in the zeitgeist. We were all reading the articles that were coming out questioning drone strikes, pre-emptive strikes, civil liberties" [Barack] Obama talking about who they would kill Jackson was confirmed to return as S. Joe even noted how during principal photography, the issues became more topical due to the disclosure of several National Security Agency surveillance-related documents. The Winter Soldier, and that the Russo brothers would direct the film. The First Avenger, said that she would not appear in the sequel. Abraham Erskine in the previous film, later said that Atwell would reappear in a flashback scene. D, [43] [97] which he later confirmed. Super Soldier series] as a way to represent, thematically, his place in the world of S. The Winter Soldier on the National Mall. Opaloch stated that while attempting to emulate the s thrillers that served as inspiration for the writers and directors, the staging and lighting tried to bring realism through "classic framing and naturalistic lighting", and the filming was done with hand-held cameras. To achieve this, Opaloch used *Arri Alexa Plus 4*: Examples of these types of scenes include the ambushes on Nick Fury in the street and Captain America in the elevator. Additional photography was filmed in December and January, [] in order for the Russos to accurately show the state of each character after the defeat of S. Age of Ultron to guide their choices. Age of Ultron, wrote and directed the mid-credits scene, [] which featured Quicksilver, the Scarlet Witch, [55] and Baron Wolfgang von Strucker. Sarofsky collaborated with comic book artist David W. Mack on the sequences. If they can build it, they built it. If we could do it, we did it. They wanted to do as little CGI as possible. We knew we were going to do CG wings. We also did some shots with wires and some with stunt doubles and head replacement. And we needed a very good digital double. The First Avenger, also worked on shots featuring an elderly Peggy Carter. This involved digitally transposing the facial features of an elderly actress onto the face of actress Hayley Atwell who had performed her lines with no make-up and only a few tracking markers. We were all over the carriers [with the virtual camera]. We were on the decks; we were flying next to them. We had a lot of close ups and different angles. On top of that, we had to destroy them all. Earl said, "The challenge was to get in all of the detail to make it feel like it is a real, working ship. We created details down to the railings and all the human-scale stuff. For the shots in which we were destroying them, we had to have the internals as well" the hallways, the storage areas. The versions had to be completed in 17 days, versus a normal turnaround time of three to four weeks for contemporary films, to make its theatrical release date. The first five items were different depending on where the film was released, while the final five items were the same across all prints. In October, Marvel released the first trailer for *Captain America: The Winter Soldier*, and S.

Chapter 4 : Fossil Flora of the John Day Basin, Oregon

*c. m. carvalho - catalogue of the miridae - part iv ~.*

All that I have thus far seen is the leaf here described, a fragment of another, and less than half a dozen fruits. The one under consideration lacks the major portion of the central lobe and the terminal portion of one of the large lateral lobes. It spreads about 8 cm. The length of the leaf can not be determined, but it can hardly have been less than 9 or 10 cm. The petiole, very thick and stout for the size of the blade, has 4 cm. This leaf has a very modern appearance, much more so, in fact, than the forms found in the Mascall beds. It suggests at once the sugar maple *Acer saccharum* Marshall of the East and is not greatly unlike small leaves of *A.* This species is named in honor of Mr. Osmond, of the University of California, who collected it. The fragmentary leaf above described is No. It was collected by Condon. A fragment of a small, three-lobed leaf showing a portion of the base, one lateral lobe, and a part of the central lobe. The length appears to have been about 5 cm. It is coarsely toothed. Another fragment from the same locality has the base with a short portion of the petiole preserved. It appears to be the same as the other. *Acer trilobatum productum* Al. This species, as may be seen from the above synonymy, was first regarded by Lesquereux as referable to the European *A.* This name was also applied to several leaves from Carbon, Wyoming, but they are clearly not the same as those under consideration. In the Cretaceous and Tertiary Floras p. They are in the characteristic white volcanic tuff, and not the hard, brownish matrix of the Current Creek deposits. Original material collected by C. Voy about Mus. Bendirei, and all the specimens are said to be from the same locality, namely, "Currant Creek, Oregon. This fragment was found to fit into and form a part of the same individual that is figured in the Auriferous gravel flora Pl. And further it was found that when so filed together they produce a leaf that must be referred to *Platanus dissecta*. The locality, plainly marked on the back of each fragment, is Table Mountain, California. Leaf coriaceous in texture, palmately, deeply three lobed, the lobes broad, roughly ovate in shape, of approximately the same size, lateral lobes at a low angle with the central lobe; all margin coarsely and irregularly toothed, being provided with low, irregular, mostly sharp pointed teeth; petiole long, very thick; midrib thick, with six or more pairs of alternate, strong secondaries which end in the large teeth of the central lobe, and have smaller branches which pass to other marginal teeth; lateral ribs nearly as strong as the midrib, at a low angle, each with about seven pairs of alternate secondaries passing to the large teeth, and those on the lower side especially with short branches, which end in marginal teeth; nervilles numerous, thin, mainly percurrent and at right angles to the secondaries; finer nervation forming a rather coarse, irregularly quadrangular network. The example figured is the only one that has thus far been found. It is a large, deeply three-lobed leaf about 12 cm. All three lobes are of approximately the same size, and all are irregularly toothed, the margin being provided with low, sharp-pointed teeth. The nervation is beautifully preserved. Maples are abundant in these beds, and many leaves, fruits, and branches have been obtained. The leaf under consideration is markedly different from *Acer Bendirei*, which is perhaps the most abundant species present, but may possibly be a very broad, coarsely toothed form of *A.* The latter species is described by its author as being prolonged at base into two small lobes which open like wings on each side of the midrib. The lateral ribs, therefore, arise at some distance above the top of the petiole in the broad, basal portion of the blade. In the leaf before me there is no indication of the basal lobes that are so conspicuous in *A.* Therefore it seems most logical to regard them as distinct, at least for the present. This species is not greatly unlike some forms of *Acer trilobatum tricuspidatum* Heer a of the Swiss Miocene. I take great pleasure in naming this species in honor of Dr. Merriam, who has done so much for the paleontology of this region. A number of branches supposed to belong to some species of *Acer*, but it is quite impossible to determine which one. *Acer*, fruits of, Lesquereux, Proc: VI, figs 2, 3, Fruits long and broad-winged, the wing being evidently very thick and provided with numerous strong veins; nucleus large, round, showing broad truncation where attached to the sister fruit. This form is so very abundant in all collections from these beds and admits so readily of separation that I have ventured to give it a name. It of course represents the fruit of one of the species founded on leaves that are also abundant in all collections, but thus far no fruit has been found attached to or even approximate to

a leaf, and until so found it is more convenient to be able to refer to the fruits independently. These fruits are, with the exception of that of *Acer gigas* supra, p. They range in length from 3. The wing is unusually broad, being not infrequently 1. It is filled with numerous strong veins, which are given off from the axis of the fruit in groups or bundles. As Lesquereux has well suggested, these fruits most closely resemble those of the living *Acer macrophyllum* Pursh, the large-leaved maple so common on the Pacific coast; in fact, they are hardly to be distinguished. All collectors have obtained it. Types of figures in this paper collected by Knowlton and Merriam, July, , in U. Fruit large, lanceolate in shape; wing relatively narrow, filled with thin veins; nucleus round or oblong, the scar of attachment to its sister fruit very oblique. This provisional species is represented by the two examples figured. The smaller is 4. It is possible that there are merely very large fruits of the following species, as they are of approximately the same shape, but there are no intermediate specimens, and I have preferred to keep them separate for the present. Collected by Knowlton and Merriam, July, U. *Acer*, fruits of, Lesquereux, Proc. Fruits of small size, similar in shape to the preceding species; length, 2. As already stated, this may be the same as the preceding form, but the specimens are so much smaller, and moreover, as there are no intermediate specimens, it has seemed best to regard them as distinct. Inasmuch as three species have been differentiated in these beds, based on leaves, it is natural to suppose that the fruits might also show differences. In any case it would seem easy to recognize the three forms of fruits here described. Fruit of enormous size, very narrow; wing of nearly similar width throughout, filled with numerous but rather fine veins; nucleus very large, elliptical in shape. This fine species is represented thus far by the single example figured, with its counterpart. It is a very long, narrow fruit, 9. The nucleus or seed proper is large, being 2 cm. The scar where it was attached to its sister fruit is oblique and very long. I know nothing either living or fossil to which this fruit can be compared. Leaf coriaceous, trifoliolate or very deeply three-lobed, lateral leaflet or lobe roughly ovate-lanceolate in shape, irregularly, deeply cut into toothed lobes or large teeth near the apex, wedge-shaped at base, acuminate at apex; middle leaflet or lobe much smaller than the lateral ones, narrowly ovate-lanceolate, long, wedge-shaped below, very acuminate at apex, margin coarsely toothed; nervation of leaflets or lobes consisting of a strong midrib and several pairs of alternate rather thin secondaries which end in the lobes or teeth; finer nervation not preserved. This species is represented only by the specimen figured, and this unfortunately is not sufficiently well preserved fully to reveal its character. It is presumably trifoliolate, but may be only deeply three-lobed. The larger leaflet is assumed from its position to be a lateral one, the middle one being much smaller. This lateral leaflet is 5. The central leaflet is 4 cm. Owing to the poor state of preservation it is not possible to fix the position of this leaf with certainty. In most trifoliolate leaves, if the leaflets differ in size, the middle one is usually the larger. In this case the larger leaflet of our specimen is the lateral one, and it is assumed to be lateral because it curves away from the smaller one and has a curved midrib, whereas the smaller one is erect and has a straight midrib. With the limitations set by the imperfections of the specimen it is perhaps unwise to attempt comparisons between it and described forms, yet a few of these may be suggested. These are all long petioled, showing them to be leaves and not leaflets, whereas ours is sessile, showing that it is probably a leaflet. If we assume the larger leaflet to be the central one of a trifoliolate leaf, it certainly suggests one of the specimens described by Lesquereux as. However, the other specimens classed with this one make it extremely improbable that ours is the same. I have, therefore, assumed that it belongs to *Rulac* formerly *Negundo*, the well-known box elder, but it must remain for future collections to settle the question.

When Caddas found out Carroll was interested in coaching, he offered him a job as a graduate assistant on his staff at Pacific. The following season, Carroll moved to Iowa State University , where he was again an assistant working on the secondary under Earle Bruce. When Monte Kiffin was named head coach of North Carolina State University in , he brought Carroll in as his defensive coordinator and secondary coach. In , Bob Cope became head coach of Pacific and brought Carroll on as assistant head coach and defensive coordinator. The next year, he moved onto the Minnesota Vikings where he held a similar position for five seasons “ The Jets lost all of their remaining games to finish “ He was fired after one season. His Patriots team won the AFC East division title, but his subsequent two teams did not fare as well “losing in the wild card playoff round in , and missing the playoffs after a late-season slide in “and he was fired after the season. Patriots owner Robert Kraft said firing Carroll was one of the toughest decisions he has had to make since buying the team, stating, "A lot of things were going on that made it difficult for him to stay, some of which were out of his control. And it began with following a legend. Under Garrett, USC had tried to recruit Carroll to be their head coach in , while he was coaching the Patriots, but Carroll was unable to take the position. Within a year of his hiring, many prominent critics reversed course. Carroll was considered one of the most effective recruiters in college football, having brought in multiple top-ranked recruiting classes; [30] [31] he was also known for getting commitments from nationally prominent players early in high school. Fourteen of those games were later vacated for breaking NCAA rules. During his tenure, USC broke its average home attendance record four times in a row they play at the Los Angeles Memorial Coliseum ; the USC home attendance average in , his first season, was 57,; by , it was over 91, During this period, USC had a game winning streak at the Coliseum, spanning 6 years The streak began on Oct. The streak ended on Oct. Prior to this the last loss was on Sept. Years later, he was asked if winning the Rose Bowl was ever not enough. We can only control getting to the Rose Bowl. Winning our conference and going to the Rose Bowl is what our goal is every year. We found that out years ago [], when we were No. We already knew that but that just proved it. We love the Rose Bowl. He had insisted over the years that he was happy at USC and that money was not an issue; he also was said to enjoy the Southern California lifestyle. I am prepared to do that. I approach it that way. I owe so much to the school and the people who follow it. And the guys who played for us. I love being here. He agreed to a contract extension in December Carroll had told his players the previous evening that he would be resigning his position with the Trojans to become the new head coach of the Seattle Seahawks. Carroll was generally regarded as one of the top college football coaches in the country, [31] [44] [45] and has been compared to College Football Hall of Fame coach Knute Rockne.

Chapter 6 : Maurice II de Craon - Wikipedia

*Maurice II de Craon is the central character of the anonymous Middle High German verse romance Moriz von Craon dated between and This, in turn, derives from a French fabliau: Du chevalier qui recovra l'amour de sa dame.*

Revolt of 1174 In , following the revolt of the sons of Henry II against their father, Maurice II counted amongst the lords that had remained faithful to the King. The same year he figured amongst the witnesses of the Treaty of Falaise establishing peace between Henry II and his sons. Third crusade Richard the Lionheart , successor to Henry II, took with him a great number of his vassals but others were not going to join him until later; Maurice II was amongst these, for, in , he was still in Anjou. We find no acts emanating from him at the time of the departure for his first voyage to the Holy Land. For the second, however, many are known. He identifies six children: The eldest daughter Avoise de Craon , married Guy V de Laval ; the second is not named, but Pierre de la Garnache , who held the rank there is evidently her husband. He died 12 July , [20] resulting in the obituary of la Haye-aux-Bons-Hommes. This, in turn, derives from a French fabliau: Authenticity of the relics given by the bishops of Sebastia. Authenticity of the relics given by the abbot of Temple [28] Dom Housseau No. About , at Valognes. The age at which one could become a knight concurred generally with the age of majority, but for orphaned possessors of fiefs the timing was often advanced. An example of a high noble being knighted long before his majority would be Geoffrey Plantagenet , aged only fourteen years when, in , the day after his engagement, he was knighted. Furthermore, their copies have attached descriptions of the seals which accompanied them and which are not all known. Only one is dated, that of 20 March , v. The date of the first accords perfectly with all the others. Cartulaire de Craon, No. He entered holy orders and it is perhaps because of this that he did not become lord of Craon in on the death of his elder brother, Maurice III. However, even if his ecclesiastical position prevented him from becoming lord of Craon it appears that it still permitted him to be owner of fiefs in England. In effect, after having met Pierre as witness to four French acts in and , one only finds him in England where, from 31 May , he is the object of numerous manifestations of Royal favour. The final command made to his benefit by Jean Sans Terre is that of 9 June He died in , for the donation of twenty sous under the annuity for the repose of his soul, made by Clemence de la Garnache , is dated She was betrothed to Thibaut II de Mathefelon, also proven by his gift to the abbaye de Fontaine-Daniel for the repose of her soul, which is not dated but received in the approval of the Bishop of Angers See folios 75 and 71 of Cartulaire de Fontaine-Daniel. Amaury I waited until to ratify it. On reading the text, adhuc Juvene, we find new proof of the youth of Maurice III en and shows that the lord who stayed at Tours to leave for the crusade was Maurice II. Sexual Violence and Rape in the Middle Ages: The sentence was delivered in He was still there in In this publication one finds an enormous quantity of documents classified in strict chronological order. Sadly the French names are the most frequently unrecognisable. Furthermore the alphabetical table that terminates the work does not contain all the names cited nor even all the names of the authors or recipients of the documents. One has to go through all the acts of the period to be certain that nothing is overlooked. Each volume is divided into two or three parts, which complicates citation, so, to simplify, the year and page are given here. It is impossible to include the name of Amaury, as the son of Maurice II of the same name was still in early childhood. It is divided into certain number of chapters each relating to a bishopric. The Archives of Mayenne possess a copy of the chapter which contains the diocese of Mans. Charpentier, Etienne; de Benoist, Alain, eds. Chroniques Craonnaises [Craon Chronicles] in French. It has to be redated at , like the other acts of Maurice II passed at the time of his second voyage to the Holy Land. The act is definitely that of Maurice II. Sources[ edit ] derived from: Sigillographie des Seigneurs de Craon.
