

Chapter 1 : best GARDEN STRUCTURES images on Pinterest | Backyard ideas, Balconies and Beautiful g

This book contains a brief overview of 42 plans of outdoor structures ranging from gazebos to playhouses to compost bins to swings to bridges. To see the actual plans, you must mail order them. They cost between \$20 and \$

If you like this, then please share! Architects tell you that what they do ends at the front and rear door. Deck Builders are not designers. Interior designers do not have the detail experience to create a long-lasting deck, though they can certainly get the spatial planning right. Landscape Designers and Architects Courses devote only weeks learning about garden structures, decks, and outdoor buildings. We recognized this gap early, in the past 30 years, we have been creating our own unique details and designs. That is What We Do. We help people create inspired outdoor spaces! Our details result in a longer lifespan and more appealing spaces. Creativity makes us a source of inspiration and details for Landscape Designers, Architects, and Builders. We offer a group of select specialist builders that bring our designs to life across North America. We are always looking for talented people, so if you know a great builder, please refer them. As sports teams use talent scouts, you can use GardenStructure. Value Vs Budget Our clients have learned the low bid lessons and are not willing to gamble their investment with builders working cheap. We design decks and outdoor structures to last years. Average decks will look good for 2 or 3 years. We strive to make our decks look good after 10 years of service. Is your average deck better value at half the price? If you are collecting bids from every deck builder that will visit, we are not your builders. By 16 years old he was an apprentice mechanic part-time during high school , building cars with friends on the weekend. At 20, he spent 2 years working with the best carpenters and building companies in the Greater Toronto Area. He stayed as long as he was learning, and when the learning ceased, he was off to the next class. He grew impatient with Architects giving him interesting projects to build, and, began working with landscape designers and landscape architects. Little did they know that he was absorbing their design talents. Within a few years, GardenStructure. Lawrence soon learned that his team could not build every project. He started partnering with specialist builders that could bring the designs to life like Paul Lafrance Design and The Deck Store. Many of our partners rely on our design expertise, and we rely on them for their unique specialties on the build side. Today we work with about 10 partners to bring our brand of beautiful to yards across North America. We are presently converting our plans to a 3D format. This new series will be easier to visualize and build. Pro versions are working drawings with a scalable template if required. Our pro plans enable Designers and Architects to specify the details, without having to guess at the structure or dimensions. If you need plans, designs or instructional materials please get in touch.

Chapter 2 : Decks, Pergolas and Outdoor Features for those with Discerning Tastes

Garden structures can enhance your landscape by adding character and style. Check out our garden structure plans and ideas to create your own backyard wonderland that reflects your personality. Adding garden structures to your garden not only enhances the garden itself but makes your garden a.

Is it an arbor, trellis, pergola, patio cover or gazebo? People often use these terms interchangeably and without knowing what each really means. Below you will find definitions for each of these structure types. Pergola A freestanding structure with an open roof that is supported by columns or posts. A pergola may be used to cover a walkway or to provide filtered shade for an outdoor living space. The word pergola has come to be used interchangeably with patio cover. A patio cover may have an open or solid roof. The term patio cover is often used interchangeably with pergola. Gazebo A freestanding, octagonal structure with a solid, pitched roof and open sides that provides full shade without obstructing views. It is common for gazebos to be screened in to provide a bug-free space for relaxing. Gazebos can be confused with pergolas. Ramada A freestanding structure similar to a pergola, but with a closed roof. A ramada provides complete shade as well as protection from rain. The closed roof traps heat, which can be beneficial in colder weather. Ramadas are often placed over outdoor kitchens or near an outdoor fireplace. Some landscape professionals use the term pavilion. Pool House A freestanding enclosed structure which can include a kitchen, game room or even a spare bedroom for guests. Often used in areas with inclement or cold weather. Also a great place for storing pool supplies and equipment. Learn more about pool house design. Arbor A small framework that supports climbing plants and serves as a passageway. Arbors are often arched and placed over a path or gate. Arbors are sometimes called pergolas or trellises. Trellis A flat section of lattice work used to support vines. Often used to add interest to a blank wall, add height to fences, or to add privacy to an outdoor structure. Trellises are commonly confused with arbors. Greenhouse Greenhouses are structures that create their own microclimate inside their walls. They are good for those who want to grow exotic plants or have homegrown food year round. Learn about the four criteria of greenhouse planning. Since many of these terms are used interchangeably it is important to be able to explain what you want to a designer or contractor. Make sure you express whether you are looking for a freestanding or attached structure and whether you want it to have an open or solid roof. If you communicate these factors clearly you will end up with the right type of structure despite what you or your designer may call it. Com - All Rights Reserved.
