Enter your mobile number or email address below and we'll send you a link to download the free Kindle App. Then you can start reading Kindle books on your smartphone, tablet, or computer - no Kindle device required.

Workplace relationships , Communication , Company culture , Colleagues Kicking off a staff meeting with a creative ice breaker activity does more than, well, break the ice. It can be inclusive for new team members, offer a bit of levity before a tense meeting , help coworkers to see each other as something other than just people who share the same office space, and is generally fun if not taken too seriously. Remember, colleagues who laugh together, work better together. Ice breakers may even give you better insight into the office hermit , or a more nuanced understanding of your boss. Need a good meeting icebreaker or two for your next conference room shindig? Here are some suggestions: These simple questions will take up less time than a full-on ice breaker game, but will still offer an amusing peek into your colleagues palate: What is your favorite ice cream flavor? What is your favorite food? What do you cook better than anyone else? What is your favorite candy bar? What would you want your last meal to be? What dish did your mom make better than any others? Who is the most influential person in your life and why? What was the best day of your life and why? Name one missed opportunity that might have changed your life. What was your favorite song in high school and what memory is associated with it? Who are you really working with anyway? These ice breaker questions may tell you a little more about your coworker than you wanted to know. Or, perhaps these icebreakers will give you some great insight into who you cube-dwell with. You may even have an ah-ha moment or two: If you woke up tomorrow as an animal, which one would it be and why? What were the characteristics of the best boss you ever had and why? What talent do you have that you wish you could use in the office? How are you underutilized in your department? What famous person could take your place in the office? What are the five essential qualities of a work culture that makes you feel engaged? What are you going to do when you retire? Why did you choose the name you did for your child? If there is a heaven, who would you most like to call there? What do you do when you feel fear? Which childhood book did you never forget? When did you first feel like an adult? Who is your personal muse? Who is your hero and why? Share a personal fact no one would ever guess about you. These may work to lighten the mood and break tension before an important meeting. A slightly obvious, but important, reminder: Are you known for making a pitch-perfect animal noise, and could you give it a try? Would you rather be President of the United States or a rock star? What is your favorite guilty pleasure TV Show? What famous person might you have been in a prior life and why? Which famous person would you never want to meet? What is the weirdest thing in your purse or pocket and why do you carry it? If you could only vacation in one location for the rest of your life, where would it be and why? Have you ever won a trophy or medal, and what for? Would you prefer to travel forward in time, or back? The point of an ice breaker activity is to generate intimacy and camaraderie, and this is more easily done in smaller, more manageable groups. Common Courtesy This game, played in groups, is all about determining which group has the most things in common. Each team will have to get creative, and get to talking, to learn 10 things all participants share in common before the other teams do or before the clock runs out. At the end of game, each team will reveal their commonalities to the larger group. For the next 10 or so minutes, let them take it from there! Have to listen to Nickleback or Maroon 5 for the rest of your life? Live in a penthouse in a big city or in a bungalow on the beach? Always have to say every single thing you think, or never be able to speak again? Have the hiccups for your rest of your life, or always feel like you have to sneeze without actually sneezing? Be able to see the future, or be able to re-do the past? Be swelteringly hot, or be artically cold? Be able to fly, or be able to breathe underwater? Be able to fly anywhere for free anytime you wanted, or have your tab permanently covered at all restaurants? Hidden Talent Show In this ice breaker activity, participants have to not only divulge their secret talent, but demonstrate it, too, in a second, speed-round talent show. Then, put the paper in a hat and shuffle it up. Pass the hat around, have each person draw a post-it note and try to guess which group member did that thing is the title of this ice-breaker game making more sense now? Let the revelatory conversation begin! And afterward, it might make life a little

better back at the cube-farm, as well! She writes all about it on her blog, [aloveyinconsequence](#). Our mission is to help women create the best careers for their lives. Join us to see what people are saying about your company, and pay it forward by sharing your own anonymous tip!

Chapter 2 : The Element Cube: 62 Elements - 1 Cube by Cillian McMinn â€™ Kickstarter

Welcome to the You CAN Do The Rubik's Â® Cube Program Our Mission is to provide resources and support to schools and youth organizations to teach STEM/STEAM standards and 21 st Century skills by using the Rubik's Cube.

Probably the only game where you can kick the referee in the face Introduction Red Card is a soccer game, but with a twist. The general idea of this game is to kick, punch and elbow each other senseless, then quickly run towards the goal and kick in the ball using an extremely cool move. Usually, in a soccer game, one passes the ball around, waits for an opening and worries about the tactics. None of all that in this game, as it is very well possible to walk forward, karate-kick another player in the head, steal the ball and somersault-kick the ball in the goal. This takes away one layer of skill tactics, passing , but also adds another tackling, evading tackles. Shots at goal go through the keeper, tackles become karate-kicks and pushes become headbutts. These Turbos are limited, as there is a Turbo Bar, which slowly fills up over time. Z is used for shooting, which also seems like an odd choice; the A or B button would be a more logical choice. Sometimes your fingers will be tied in a knot because of the frantic and fast gameplay, but you will learn it eventually. Luckily it is possible to manually choose which button does what, but the controls will never be perfect. The main selling part of this game is obviously the violence, which is actually pretty good. There are many different kicks, punches and dirty moves to pull off, and they look and sounds realistic enough. This is a huge flaw in the game. All that happens now is waiting for a full Turbo, go to the goal and shoot the Turbo shot which goes in a lot of the times. The introduction movie, the players, the field and the stadiums all look very impressive. The moves of the players which is one of the important things is great and the way hit players fall down is very realistic. The menus, even if not very important, look polished and nice. The sound of the game is another story. The menus have some tunes, but expect nothing diverse or exciting. The commentators of the matches are actually pretty nice to listen to and it takes quite a while to get bored with them. The sound effects sound pretty good. The crowd cheers with you as something exciting happens and sometimes sings some encouragement songs, which is a nice addition. I think you will be. Final Recommendation The reason I bought this game was because it only set me back 9 euros. I strongly advise against picking it up at the full price.

Chapter 3 : MERGE Cube | The Hologram You Hold in Your Hand

I strongly believe that if you can draw a cube, you can adapt that cube to produce most products on paper. The MicroDot® stencil is compact, it uses the 'dot-to-dot' principle taken from the DTDOT® and also has a selection of carefully placed ellipse tools so the pupil can actually see how to use them.

The cube brings all of their greatest findings together, to act as a constant source of inspiration for all who choose to own one. Over half of the very building blocks that make up our planet, in the palm of your hand. Why buy an Element Cube? You want 62 Elements now, rather than waiting decades to build a collection. To be one of the first people on earth to own this world record. Matches Apple products beautifully The perfect size for your office or home 2" x 2" Simple in design, yet complex in nature The centrepiece for any collection The focal point for any space Fully scratch resistant The cube is available in two finishes: The bracelets are a wearable testament to this scientific marvel. A stylish and minimalist alternative to the cube itself. A story to tell wherever you go. As minimalist as can be. Nylon cord alternative Necklaces: The perfect wearable version of the cube. Inspired by the periodic table, this necklace serves as a beautiful reminder of all that our planet is made of. Try the Element Gift Set for size - a little bit of everything for the uber geek! The Element Cube really is the first of its kind. Containing over 60 metals in one cube, this is truly the largest alloy in the world. We would love to see this go down in the books as the most fascinating cube on Earth, and as we speak, the good people over at Guinness are learning about the cube themselves! Who is the cube for? Those who love science, innovation, metallurgy, or quirky things. The collectors, and purveyors of all things cool. Scientists, professors, innovators, and geeks. When will you have your Rewards? Every cube will be delivered before Christmas! To ensure that each and every reward arrives long before Christmas, we are working with global fulfilment company, Shipwire! Using fulfilment centres in the UK and US, we are able to offer the same low cost shipping to every single backer. After approaching a lot of different metallurgy companies, in Europe and in Asia I finally found the perfect supplier. With decades of experience in the field of producing intricate metal parts, and access to every metal required to make the cube, we began the year long journey of producing, and modifying prototypes. This is the act of taking all 62 metals in powder form, and pressing them together. This process allowed us to make several different products, of varying shapes and sizes. I have a passion for science and technology, and with the power of crowdfunding, hope to bring some of my own ideas to fruition. With my experience in product design, and desire to create new things, I hope to make a lasting contribution to the Kickstarter community. Risks and challenges As with any new project, there is the potential for unforeseen risks and challenges. In following the timeline detailed in the shipping info, we will minimise the risk of any surprises along the way, and ensure that every deadline is met. Questions about this project?

Chapter 4 : Miles O'Grady (Author of You Can Kick the Cube!)

Miles O'Grady is the author of You Can Kick the Cube! (avg rating, 0 ratings, 0 reviews, published).

A prototype is a preliminary model of something. Projects that offer physical products need to show backers documentation of a working prototype. Though the development process can vary for each project, these are the stages we typically see: Proof of Concept Explorations that test ideas and functionality. Functional Prototype Demonstrates the functionality of the final product, but looks different. Appearance Prototype Looks like the final product, but is not functional. Design Prototype Appearance and function match the final product, but is made with different manufacturing methods. Production Prototype Appearance, function, and manufacturing methods match the final product. What is a prototype? I also run a company called DTResources Ltd who will deal with production and shipping once the campaign is finished. I have been a teacher for 17 years and have taught thousands of pupils how to draw isometric sketching techniques. I also work as an educational consultant and have delivered many drawing courses to teachers too. I have designed many drawing stencils over the years, they have been popular but made in very small batches. This is a small stencil, that is packed with features and FUN. I am ready to go with manufacturing once backed and order numbers are confirmed. With the help from kickstarter, I am sure my stencil will make its way round the world! I have recently been doing more and more consultancy work and am very passionate about trying to get as many pupils and teachers in the country to draw correctly. I strongly believe that if you can draw a cube, you can adapt that cube to produce most products on paper. There is a stencil for isometric cut outs, a funky arrow for annotation that can even be flipped to highlight environmental consideration. If you back me, you will be helping more people learn to draw and design like a Pro. S proof of financial backing will be included with your order so you can claim money back if you work in a school. Risks and challenges This is a low risk project. I run a company called DTResources Ltd, once backing the campaign is finished, work can start at putting orders together for distribution. No risk at all in meeting the demands of the project. I also manage two Facebook groups and have access to inform over 20, teachers about my product. I have production methods in place to start large scale batch production once backed. Questions about this project? This is just a simple and cheap way to wish me well in helping people to draw. As a thank you, you will have your name added to my website so you can see that your help has been put to good use.

Chapter 5 : Petcube Wi-Fi Pet Cameras - Monitor & Interact With Pets Remotely

You ain't gotta lie ta kick it [Ice Cube (verse one)] I know ya like to see me doin' bad But i'm doin' good, fuck the police that's rollin' thru my neighborhood.
